Statistics, Testing, and Defense Acquisition National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Panel on Statistical Methods for Testing and Evaluating Defense Systems, 1999-09-17 The Panel on Statistical Methods for Testing and Evaluating Defense Systems had a broad mandate to examine the use of statistics in conjunction with defense testing This involved examining methods for software testing reliability test planning and estimation validation of modeling and simulation and use of modern techniques for experimental design Given the breadth of these areas including the great variety of applications and special issues that arise making a contribution in each of these areas required that the Panel's work and recommendations be at a relatively general level However a variety of more specific research issues were either brought to the Panel's attention by members of the test and acquisition community e.g. what was referred to as Dubin's challenge addressed in the Panel's interim report or were identified by members of the panel In many of these cases the panel thought that a more in depth analysis or a more detailed application of suggestions or recommendations made by the Panel would either be useful as input to its deliberations or could be used to help communicate more individual views of members of the Panel to the defense test community This resulted in several research efforts Given various criteria especially immediate relevance to the test and acquisition community the Panel has decided to make available three technical or background papers each authored by a Panel member jointly with a colleague These papers are individual contributions and are not a consensus product of the Panel however the Panel has drawn from these papers in preparation of its final report **Statistics Testing and Defense Acquisition** The Panel has found each of these papers to be extremely useful and they are strongly recommended to readers of the Panel's final report

[Selected Papers](#) Herbert Robbins, 2012-12-06 Herbert Robbins is widely recognized as one of the most creative and original mathematical statisticians of our time The purpose of this book is to reprint on the occasion of his seventieth birthday some of his most outstanding research In making selections for reprinting we have tried to keep in mind three potential audiences 1 the historian who would like to know Robbins' seminal role in stimulating a substantial proportion of current research in mathematical statistics 2 the novice who would like a readable conceptually oriented introduction to these subjects and 3 the expert who would like to have useful reference material in a single collection In many cases the needs of the first two groups can be met simultaneously A distinguishing feature of Robbins' research is its daring originality which literally creates new specialties for subsequent generations of statisticians to explore Often these seminal papers are also models of exposition serving to introduce the reader in the simplest possible context to ideas that are important for contemporary research in the field An example is the paper of Robbins and Monroe which initiated the subject of stochastic approximation We have also attempted to provide some useful

guidance to the literature in various subjects by supplying additional references particularly to books and survey articles with some remarks about important developments in these areas **British Books in Print** ,1968 *Handbook of Test*
