_ **Gene expression:** Process from gene to protein (transcription -> translation -> protein modification)

+ **Transcription** (take place inside **nucleus**)

+ **Translation** (take place **cytosol**)

+ **Protein modification** (take place **endoplasmic reticulum**)

_ **Role:** produce **structural protein** (constructing new membrane and new protein components of organelles) and **functional protein** (go to the blood system and functions as hormone or enzymes)

2. Function of Organelles

_ **Plasma Membrane:** separating **intracellular fluid (ICF)** and **extracellular fluid (ECF)**, control movements of molecules into and out of cell.

_ **ER (Endoplasmic Reticulum):**

+ **Rough ER: protein synthesis** (mRNA moves to ribosome on rough ER to start Protein synthesis, creating functional protein + structure protein)

+ **Smooth ER: lipid synthesis**, serves as transport vesicle, store calcium (In some cell, smooth ER secretes lipid-derived steroid hormone.)

_ **Centrosome:** establish the **microtubules** for cell division (**gamma tubulin + alpha tubulin protein** on the surface of centrosome makes the microtubules)

+ If the microtubules are destroyed, cell division stops and gets stuck at metaphase.

of experiments sponsored by the U S government in which people were exposed to radiation without their knowledge After reviewing hundreds of thousands of documents from the Atomic Energy Commission and other agencies the Advisory Committee appointed by President Clinton in January 1994 found that nearly 4 000 human radiation experiments most involving very low doses of radioactive tracers were sponsored by the federal government between 1944 1974 This book documents these findings to provide a fascinating if not disturbing reminder of both the shocking standards for human experimentation and the practice of government secrecy in recent history Carried out at the height of the Cold War experiments included feeding radioactive cereal to teenagers at a school for the mentally retarded irradiating the testicles of prison inmates injecting plutonium into hospital patients and intentional releases of radiation into the environment The book places these experiments within their historical context and a review of the relevant government policies and ethics standards at the time is included The analysis is then applied to contemporary research on human subjects The book concludes with a discussion of the Committee s key findings and a set of recommendations for changes in institutional review boards the interpretation of ethics rules and policies the conduct of research involving military personnel the oversight and accountability for ethical violations compensation for research injuries and balancing national securities interests with the rights of the public This compelling volume will prove to be a landmark in the development of standards for human experimentation Ethicists public health professionals and those interested in the history of medicine and Cold War history will be intrigued by the findings in this volume Publisher description LoC
