Analysis of Electrical Circuits with Variable Load Regime Parameters A. Penin, 2015-04-07 This book introduces electric circuits with variable loads and voltage regulators. It allows to define invariant relationships for various parameters of regime and circuit sections and to prove the concepts characterizing these circuits. Generalized equivalent circuits are introduced. Projective geometry is used for the interpretation of changes of operating regime parameters. Expressions of normalized regime parameters and their changes are presented. Convenient formulas for the calculation of currents are given. Parallel voltage sources and the cascade connection of multi port networks are described. The two value voltage regulation characteristics of loads with limited power of voltage source is considered. The book presents the fundamentals of electric circuits and develops circuit theorems. It is useful to engineers, researchers and graduate students who are interested in the basic electric circuit theory and the regulation and monitoring of power supply systems. **DESIGN, SYNTHESIS AND**

CONTROL OF A MECHANICAL SERVO PRESS: AN INDUSTRIAL APPLICATION, Abstract Due to precision, flexibility, simplicity in construction, easy control, higher speed and lower energy consumptions, servo presses have recently become popular in metal forming applications. Servo press technology combines the advantages of hydraulic and conventional mechanical presses without their drawbacks. This study presents design, construction and demonstration of a servo crank press system for metal forming operations. The research involves kinematics and motion optimization, dynamic modeling, structural design and analysis, servo motor selection, automation and control and operational performances of the servo press. The press used in this work has a load capacity of 50 ton and stroke capacity of 200 mm. Firstly, optimized trajectories of ram scenarios are generated. Then, dynamic modeling using Lagrange approach is presented. Next, structural model is constructed and Finite Element Analysis (FEA) of press parts are performed within safety limits. A servo motor with a reduction unit is selected based on dynamic model. After that, a new automation system is developed and Cascade Feed Forward (CasFF) control is applied. Moreover, four motion scenarios: crank dwell, link and soft motion are employed for the performance assessment of press. Finally, the dynamic model is verified by the experimental results. The research study is carried out under support and grant of an industrial project aiming to provide know-how to industry and researchers. **Key Words:** Servo crank press, metal forming, motion design, dynamic modeling, system control. **Recent Improvements of Power Plants Management and Technology**

Electricity Supply Systems of the Future Nikos Hatziaargyriou, Iony Patriota de Siqueira, 2020-07-20 This book offers a vision of the future of electricity supply systems and CIGRE s views on the know how that will be needed to manage the transition toward them A variety of factors are driving a transition of electricity supply systems to new supply models in particular the increasing use of renewable sources environmental factors and developments in ICT technologies These factors suggest that there are two possible models for power network development and that those models are not necessarily exclusive 1 An increasing importance of large networks for bulk transmission capable of

interconnecting load regions and large centralized renewable generation resources including offshore and of providing more interconnections between the various countries and energy markets 2 An emergence of clusters of small largely self contained distribution networks which include decentralized local generation energy storage and active customer participation intelligently managed so that they operate as active networks providing local active and reactive support The electricity supply systems of the future will likely include a combination of the above two models since additional bulk connections and active distribution networks are needed in order to reach ambitious environmental economic and security reliability targets This concise yet comprehensive reference resource on technological developments for future electrical systems has been written and reviewed by experts and the Chairs of the sixteen Study Committees that form the Technical Council of CIGRE

China's Human Rights Lawyers Eva Pils, 2014-11-20 This book offers a unique insight into the role of human rights lawyers in Chinese law and politics In her extensive account Eva Pils shows how these practitioners are important as legal advocates for victims of injustice and how bureaucratic systems of control operate to subdue and marginalise them The book also discusses how human rights lawyers and the social forces they work for and with challenge the system In conditions where organised political opposition is prohibited rights lawyers have begun to articulate and coordinate demands for legal and political change Drawing on hundreds of anonymised conversations the book analyses in detail human rights lawyers legal advocacy in the face of severe institutional limitations and their experiences of repression at the hands of the police and state security apparatus along with the intellectual political and moral resources lawyers draw upon to survive and resist Key concerns include the interaction between the lawyers and their bureaucratic professional and social environments and the forms and long term political impact of resistance In addressing these issues Pils offers a rare evaluative perspective on China's legal and political system and proposes new ways to assess domestic advocacy's relationship with international human rights and rule of law promotion This book will be of great interest and use to students and scholars of law Chinese studies socio legal studies political studies international relations and sociology It is also of direct value to people working in the fields of human rights advocacy law politics international relations and journalism *Magnetic Resonance and Related Phenomena* E. Murzin, 2024-08-23

Today there is growing interest in aqueous phase catalytic conversions for the valorization of renewable biomass based feedstocks for biorefineries to produce in a sustainable way biofuels chemicals power energy materials pharmaceuticals and food This is because of the highly polar nature of water which makes it an ideal medium to convert polar biomass based lignocellulose cellulose hemicellulose lignin with high oxygen content and their upgraded products such as hydrophilic carbohydrates platform chemicals and their derivatives Another reason which makes water the solvent of choice is that water itself is involved either as a reagent or as a byproduct even in large amounts in typical conversions for the valorization of biomass The obtained intermediates further react in the aqueous medium often without any separation and purification to manufacture more valuable products This results in substantial energy savings lower emissions and economic benefits Furthermore water could act as a catalyst in conversions of biomass based feedstocks such as in liquefaction reactions under subcritical conditions Moreover novel types of catalytic reactivity have been observed in the aqueous solvent not only with water soluble transition metal catalytic complexes but also with conventional heterogeneous catalysts and catalytic nanoparticles in a broad spectrum of different reactions such as inter alia aldol condensations and hydrogenation reactions For example in the aqueous phase hydrogenation of the biomass based key platform chemical levulinic acid into valerolactone and beyond employing heterogeneous catalysts and nanoparticles the presence of water has a beneficial effect and accelerates the reaction rates whereas in organic solvents much lower activities were observed This promotional effect of water in the hydrogenation of levulinic acid was proved by many experimental and theoretical studies using a broad spectrum of different types of catalytic systems
