Informatics Nurse Board Certification Test Content Outline:

Forecasting Informatics Competencies for Nurses in the Future of Connected Health Judy Murphy, William Goossen, 2017-01-15 Nursing informatics has a long history of focusing on information management and nurses have a long history of describing their computer use. However, based on the technical advances and through the ongoing and consistent changes in healthcare today, we are now challenged to look to the future and help determine what nurses and patients/consumers will need going forward. This book presents the proceedings of the Post Conference to the 13th International Conference on Nursing Informatics held in Geneva, Switzerland, in June 2016. The theme of the Post Conference is Forecasting Informatics Competencies for Nurses in the Future of Connected Health. This book includes 25 chapters written as part of the Post Conference, a result of the collaboration among nursing informatics experts from research, education, and practice settings from 18 countries and from varying levels of expertise: those beginning to forge new frontiers in connected health and those who helped form the discipline. The book content will help forecast and define the informatics competencies for nurses in practice and, as such, it will also help outline the requirements for informatics training in nursing programs around the world. The content will aid in shaping the nursing practice that will exist in our future of connected health when practice and technology will be inextricably intertwined.
