Relevance and Irrelevance Jan Strassheim,Hisashi Nasu,2018-09-24 Relevance drives our actions and channels our attention it shapes how we make sense of the world and communicate with each other Irrelevance spreads a twilight which blurs the line between information we do not want to access and information we cannot access In disciplines as diverse as philosophy sociology the information sciences and linguistics relevance has been proposed as a key concept This book is the first to bring together the often unrelated traditions Researchers from different fields discuss relevance and relate it to the challenges of irrelevance which have so far been neglected despite their significance for our chances of making well informed decisions and understanding others The contributions focus on theoretical and conceptual questions on specific factors and fields and on practical and political implications of relevance and irrelevance as forces which are even stronger when they remain in the background *Education from a Whiteheadian Point of View* Vesselin Petrov,2019-03-28 The basic aims of contemporary thinking in education are to cultivate a proper comprehension of the meaning and purpose of education and the role of the teacher and to develop adequate theoretical and methodological frameworks that combine some of the positive sides of the leading theories while avoiding their disadvantages Toward these ends one excellent candidate for

consideration is Alfred North Whitehead's 1861-1947 process relational philosophy of education as set forth in *The Aims of Education* 1929 and elsewhere. The contributors to this volume analyze Whitehead's philosophy of education in a detailed and critical fashion including inquiring into the development of cycle-based approaches to education like Whitehead's in intellectual history as well as its potential objective bases. They also demonstrate how this relates to and can be integrated with other leading theories of education and contemporary pedagogical thinking and identify avenues for its positive practical application in schooling across the globe as well as in scientific research. The book further critically evaluates current educational practices and the organization of educational institutions in this light and the effectiveness of teaching strategies that are founded upon some of its principles while also exploring the ramifications of its selection and application in education for society in general as well as for our common civilizational aspirations including humanity's addressing of global problems such as the ecological crisis. In addition, the volume also serves to lay some of the groundwork for its potential further development.
