Behaviors and Technologies for Financial Innovations Wesley Mendes-Da-Silva, 2018-07-26 This book offers comprehensive examination of research on the relevance of individual behavior and technology to financial innovations. The chapters cover current topics in finance including integrated reporting, people finance, crowdfunding, and corporate networks. It provides readers with an organized starting point to explore individual behaviors and new technologies used in financial innovations. The explicit and growing speed of the spread of new technologies has hastened the emergence of innovation in the field of finance. Topics like the Internet of Things, semantic computing, and big data finance are motivating the construction of financial tools that translate into new financial mechanisms. This book strives to help readers better understand the dynamic of the changes in financial systems and the proliferation of financial products. Individual Behaviors and Technologies for Financial Innovations is organized in 16 chapters organized in three parts. Part I has eight chapters that review the research on gender differences in attitudes about risk and propensity to purchase automobile insurance, financial literacy models for college students, wellness and attitude of university students in the use of credit cards, impact of programs, income distribution, and propensity to remain in employment, financial literacy, and propensity to resort to informal financing channels, risk behavior in the use of credit cards by students. Part II reviews the research on financing for startups and SMEs, exploring funding through crowdfunding, platform operating credit unions, and using networks of friends to finance small businesses outside the domestic market. The four chapters of Part III describe contexts of financial innovation in listed companies, including society's demands on their behavior, we discuss motivations for companies to participate in corporate sustainability indexes, corporate performance through their profile of socially responsible investments, influence of networks of social relations in the formation of boards and management of companies, and also the precariousness of financial decisions in large companies as well as the role of the internet in corporate communication with the market. The Science and Practice of Middle and Long Distance Running Richard Blagrove, Philip Hayes, 2021-03-29 The popularity of distance running as a sport and a recreational activity is at an all time high. Motivated by the desire to achieve a personal best, remain healthy, or simply complete an event, distance runners of all ages and abilities actively seek out advice from experienced coaches and sport scientists. This is also reflected in the growth of programmes of education for young coaches and aspiring sport scientists in recent years. There are a multitude of different approaches to training distance runners, however, the basic principles and ingredients required for success are applicable to any distance runner. The science that underpins the training and physical preparation of distance runners has developed considerably in recent years. The most experienced and successful coaches in the distance running community rarely have the opportunity to share their tried and tested methods of training. Similarly, the novel work of sport scientists is often only accessible to elite runners, their support teams, and academia. The Science and Practice of Middle and Long Distance Running links together the science and coaching artistry associated with preparing distance runners for events ranging from 800 m up to ultra marathon distances. It combines the latest

scientific evidence published by world leading sport scientists with the sound training principles and strategies adopted by experienced coaches The book translates cutting edge scientific research from the fields of physiology biomechanics psychology and nutrition into practical suggestions for achieving success Important topical issues and contemporary practices related to health and performance are also addressed This book is an essential addition to the library of any distance runner coach or sport scientist
