Synchroflash photography is accomplished by some method whereby the flashbulb or electronic flash is set off at precisely the same instant as the opening of the shutter.

M X  
Socket

E  
Socket

In the KONICA F, it is possible to synchronize shutter action with the instantaneous discharge of electronic flash at shutter speeds up to  $1/125$  second because the metallic focal plane shutter sweeps across the film surface in only 6 milliseconds.

Full synchronization at all shutter speeds is possible with class M flashbulbs.

Moreover, automatic adjustment of shutter action delay is effected so that the full intensity of the flash is utilized without waste.
