Lycoming T53 Maintenance Manual:

Aviation Unit and Aviation Intermediate Maintenance Manual, 1992 **Aviation Unit and Intermediate Unit Maintenance Manual**, 1990 *Manuals Combined"* ARMY AIRCRAFT GAS TURBINE ENGINES , COURSE OVERVIEW

Fulfilling the Army's need for engines of simple design that are easy to operate and maintain the gas turbine engine is used in all helicopters of Active Army and Reserve Components and most of the fixed wing aircraft to include the Light Air Cushioned Vehicle LACV. We designed this subcourse to teach you theory and principles of the gas turbine engine and some of the basic army aircraft gas turbine engines used in our aircraft today.

CHAPTERS OVERVIEW

Gas turbine engines can be classified according to the type of compressor used, the path the air takes through the engine and how the power produced is extracted or used. The chapter is limited to the fundamental concepts of the three major classes of turbine engines, each having the same principles of operation. Chapter 1 is divided into three sections: the first discusses the theory of turbine engines, the second section deals with principles of operation, and section III covers the major engine sections and their description. CHAPTER 2 introduces the fundamental systems and accessories of the gas turbine engine. Each one of these systems must be present to have an operating turbine engine. Section I describes the fuel system and related components that are necessary for proper fuel metering to the engine. The information in CHAPTER 3 is important to you because of its general applicability to gas turbine engines. The information covers the procedures used in testing, inspecting, maintaining, and storing gas turbine engines. Specific procedures used for a particular engine must be those given in the technical manual TM covering that engine. The two sections of CHAPTER 4 discuss in detail the Lycoming T53 series gas turbine engine used in Army aircraft. Section I gives a general description of the T53, describes the engine's five sections, explains engine operation, compares models and specifications, and describes the engine's airflow path. The second section covers major engine assemblies and systems. CHAPTER 5 covers the Lycoming T55 gas turbine engine. Section I gives an operational description of the T55, covering the engine's five sections. Section II covers in detail each of the engine's sections and major systems. The SOLAR T62 auxiliary power unit (APU) is used in place of ground support equipment to start some helicopter engines. It is also used to operate the helicopter hydraulic and electrical systems when this aircraft is on the ground to check their performance. The T62 is a component of both the CH 47 and CH 54 helicopters; part of them, not separate like the ground support equipment APU's. On the CH 54, the component is called the auxiliary powerplant rather than the auxiliary power unit as it is on the CH 47. The two T62's differ slightly. CHAPTER 6 describes the T62 APU, explains its operation, discusses the reduction drive, accessory drive, combustion, and turbine assemblies, and describes the fuel, lubrication, and electrical systems. CHAPTER 7 describes the T63 series turboshaft engine, which is manufactured by the Allison Division of General Motors Corporation. The T63 A 5A is used to power the OH 6A, and the T63 A 700 is in the OH 58A light observation helicopter. Although the engine dash numbers are not the same for each of these engines, they are basically the same. As shown

in figure 7 1 the engine consists of four major components the compressor accessory gearbox combustor and turbine sections This chapter explains the major sections and related systems The Pratt and Whitney T73 P 1 and T73 P 700 are the most powerful engines used in Army aircraft Two of these engines are used to power the CH 54 flying crane helicopter The T73 design differs in two ways from any of the engines covered previously The airflow is axial through the engine it does not make any reversing turns as the airflow of the previous engines did and the power output shaft extends from the exhaust end

CHAPTER 8 describes and discusses the engine sections and systems Constant reference to the illustrations in this chapter will help you understand the discussion

After my retirement decisions had to be made to exist in this society. Immediately after receiving my first official United States Air Force retirement check of 315.00 it wasn't enough money to buy a toothpick to go with a glass of water, let alone enough change for a tip to leave for the waitress. The family and I talked freely of what had to be done to pay the basic bills. One consolation was that my wife was a qualified California Real Estate Broker, but that often didn't provide enough money to buy a loaf of bread and butter to put on the table unless she closed some large real estate sales package. We had a give and take ordeal and had to weigh each option or requirement for funds. After researching all the choices of acceptable approaches, I elected to enter the electronics field using my VA education bill. My first step was to visit the Veterans Administration within the Los Angeles area. Many attempts were made because of changing government requirements on submission of required correspondence. Numerous forms had to be filled out correctly because the amount of support would be based on the input information. So I lucked out for the maximum amount to be paid for attending.
