Kindergarten Math Observations Mrs. Miller, Antelope Elementary, Kindergarten Observed: Wednesday (9:00am-10:30am) 3/27/13 Classroom rotation- children went from one room to the next for separate subjects, also each group of kids had been evaluated and put into advanced, moderate, and standard levels. This was also known as 3rd level, 2nd level, and 1st level kids. Advanced Group- 3rd level kids Classroom was set up into three separate group tables. Kids would move from work table to work table to complete different math activities.

Before starting their groups the teacher first went thru math skills they had learned the previous week (adding the dots on a two sided domino). Then the teacher went on to this week's concept (adding objects). She then read a story about a girl and a boy that wanted to see how many magnets they had together. The girl had 3 black magnets and the boy had 2 hand magnets. She then had the children add up (count) the total amount of magnets on the board. She then asked what they thought the math problem would be. They repeated $3+2=5$.

She then asked if all students had understood why it was that and all answered with either the sign language symbol for I understand or yes. Group #1- Played a version of math bingo. Used math problems to find what number to put there chip on. The answer to that answer was where there chip was then placed. This game continued until all squares were filled. This group was assisted by Mrs. Joyce (a.k. a teacher's assistant). When kids began to struggle with problems for example like: $3+4$, the assistant slowed down the game and made sure each student recognized that $3+4$ was 7 and then to place their chip on seven.

Group #2- This group was with the teacher. This group worked through a worksheet paper with their teacher. The first side of the worksheet was about counting coins. Mrs. Miller first asked them the name of the coin (ex. Nickel). The children answered nickel. She then asked what the value of the coin was (ex. Nickel= 5cents). The children answered 5. She then asked the children to count by fives for each coin. She then asked the children if the answer was 15 cents or \$15. They answered 15 cents.

Example problem : (three nickels) $5...10...15 = 15$ cents The second side of the work sheet was drawing what the story was saying as first a picture, or a visual, and then as an equation. Mrs. Miller first read the story. Then the students went thru drawing the picture with the teacher. Example problem: Tanya has 2 red balloons and 1 yellow balloon draw the picture. Mrs. Miller then asked the students what the problem would look like. The students answered $2+1=3$. She then made sure that each student understood and had the correct answer before proceeding to the next problem.

Example problem: Jamal has 3 blue squares and 2 green squares, draw the picture. Mrs. Miller then asked the students what the problem would look like. The students answered $3+2=5$.
