**The Royal Society and the Promotion of Science since 1960** Peter Collins, 2015-11-12 The Royal Society is one of the world s oldest and most prestigious scientific bodies but what has it done in recent decades Increasingly marginalised by postwar developments and the reforms of civil science in the 1960s the Society was at risk of resting on its laurels Instead it found ways of exploiting its unique networks of scientific talent to promote science Creating opportunities for outstanding individuals to establish and advance research careers influencing policymaking at national and international levels and engaging with the public outside the world of professional science the Society gave fresh expression to the values that had shaped its long history Through unparalleled access to the Society s modern archives and other archival sources interviews with key individuals and extensive inside knowledge Peter Collins shows how the Society addressed the challenges posed by the astounding growth of science and by escalating interactions between science and daily life Rivista J-Reading n. 1-2014 Gino De Vecchis, 2014-06-01 IN QUESTO NUMERO Sirpa Tani National cases international collaboration an example from Finland Joop van der Schee Looking for an international strategy for geography education Andrea Favretto Scale factor

*Higher-Order Time Asymptotics of Fast Diffusion in Euclidean Space: A Dynamical Systems Approach* Jochen Denzler, Herbert Koch, Robert J. McCann, 2015-02-06 This paper quantifies the speed of convergence and higher order asymptotics of fast diffusion dynamics on  $R^n$  to the Barenblatt self similar solution Degeneracies in the parabolicity of this equation are cured by re expressing the dynamics on a manifold with a cylindrical end called the cigar The nonlinear evolution becomes differentiable in  $H^1$  spaces on the cigar The linearization of the dynamics is given by the Laplace Beltrami operator plus a transport term which can be suppressed by introducing appropriate weights into the function space norm plus a finite depth potential well with a universal profile In the limiting case of the linear heat equation the depth diverges the number of eigenstates increases without bound and the continuous spectrum recedes to infinity The authors provide a detailed study of the linear and nonlinear problems in  $H^1$  spaces on the cigar including a sharp boundedness estimate for the semigroup and use this as a tool to obtain sharp convergence results toward the Barenblatt solution and higher order asymptotics In finer convergence results after modding out symmetries of the problem a subtle interplay between convergence rates and tail behavior is revealed The difficulties involved in choosing the right functional spaces in which to carry out the analysis can be interpreted as genuine features of the equation rather than mere annoying technicalities

Teaching and Learning Secondary School Mathematics Ann Kajander, Jennifer Holm, Egan J Chernoff, 2018-10-24 This volume brings together recent research and commentary in secondary school mathematics from a breadth of contemporary Canadian and International researchers and educators It is both representative of mathematics education generally as well as unique to the particular geography and culture of Canada The chapters address topics of broad applicability such as technology in learning mathematics recent interest in social justice contexts in the learning of mathematics as well as Indigenous education The voices of classroom practitioners the group ultimately responsible for implementing this new vision of mathematics teaching and learning are not forgotten Each section includes a chapter written by a classroom teacher making this volume unique in its approach We have much to learn from

one another and this volume takes the stance that the development of a united vision supported by both research and professional dialog provides the first step

**A Homology Theory for Smale Spaces** Ian F. Putnam, 2014-09-29 The author develops a homology theory for Smale spaces which include the basic sets for an Axiom A diffeomorphism. It is based on two ingredients. The first is an improved version of Bowen's result that every such system is the image of a shift of finite type under a finite-to-one factor map. The second is Krieger's dimension group invariant for shifts of finite type. He proves a Lefschetz formula which relates the number of periodic points of the system for a given period to trace data from the action of the dynamics on the homology groups. The existence of such a theory was proposed by Bowen in the 1970s.

**Proof of the 1-Factorization and Hamilton Decomposition Conjectures** Béla Csaba, Daniela Kühn, Allan Lo, Deryk Osthus, Andrew Treglown, 2016-10-05 In this paper the authors prove the following results via a unified approach for all sufficiently large  $n$ :

- i 1-factorization conjecture: Suppose that  $n$  is even and  $D \geq \frac{n}{4} + 1$ . Then every  $D$ -regular graph  $G$  on  $n$  vertices has a decomposition into perfect matchings.
- ii Hamilton decomposition conjecture: Suppose that  $D \geq \frac{n}{2}$ . Then every  $D$ -regular graph  $G$  on  $n$  vertices has a decomposition into Hamilton cycles and at most one perfect matching.
- iii Optimal packings of Hamilton cycles: Suppose that  $G$  is a graph on  $n$  vertices with minimum degree  $\geq \frac{n}{2}$ . Then  $G$  contains at least  $\frac{2}{n} \delta(G)$  edge-disjoint Hamilton cycles. Here  $\delta(G)$  denotes the degree of the largest even regular spanning subgraph one can guarantee in a graph on  $n$  vertices with minimum degree  $i$ .

was first explicitly stated by Chetwynd and Hilton. ii and the special case  $\frac{n}{2}$  of iii answer questions of Nash-Williams from 1970. All of the above bounds are best possible.
