Imaginary Schur-Weyl Duality Alexander Kleshchev, Robert Muth, 2017-01-18 The authors study imaginary representations of the Khovanov-Lauda-Rouquier algebras of affine Lie type Irreducible modules for such algebras arise as simple heads of standard modules In order to define standard modules one needs to have a cuspidal system for a fixed convex preorder A cuspidal system consists of irreducible cuspidal modules one for each real positive root for the corresponding

affine root system X as well as irreducible imaginary modules one for each multiplication. The authors study imaginary modules by means of imaginary Schur-Weyl duality and introduce an imaginary analogue of tensor space and the imaginary Schur algebra. They construct a projective generator for the imaginary Schur algebra which yields a Morita equivalence between the imaginary and the classical Schur algebra and construct imaginary analogues of Gelfand-Graev representations, Ringel duality and the Jacobi-Trudy formula.

Zones of Control Pat Harrigan, Matthew G. Kirschenbaum, 2016-04-15 A look at wargaming's past, present and future from digital games to tabletop games and its use in entertainment, education and military planning. With examples from Call of Duty, Modern Warfare, Harpoon, Warhammer 40,000 and more. Games with military themes date back to antiquity and yet they are curiously neglected in much of the academic and trade literature on games and game history. This volume fills that gap, providing a diverse set of perspectives on wargaming's past, present and future. In *Zones of Control*, contributors consider wargames played for entertainment, education and military planning in terms of design, critical analysis and historical contexts. They consider both digital and especially tabletop games, most of which cover specific historical conflicts or are grounded in recognizable real-world geopolitics. Game designers and players will find the historical and critical contexts often missing from design and hobby literature; military analysts will find connections to game design and the humanities; and academics will find documentation and critique of a sophisticated body of cultural work in which the complexity of military conflict is represented in ludic systems and procedures. Each section begins with a long anchoring chapter by an established authority, which is followed by a variety of shorter pieces, both analytic and anecdotal. Topics include the history of playing at war, operations research and systems design, wargaming and military history, wargaming's ethics and politics, gaming, irregular and non-kinetic warfare and wargames as artistic practice.
