Solti, Ramesh Chander Kuhad, Rup Lal, Parveen Rishi, 2023-12-19 This book examines the role of human microbiome in human health and diseases The initial chapters present tools for genetic manipulation of gut microbiota and the therapeutic applications of engineered microbiota They discuss the interaction between human microbiota and host in defining the prominent role of microbes in the development and progression of major human diseases The book also summarizes the current applications and trends for the development production and analytical characterization of recombinant therapeutic proteins in microbial systems It also reviews the role of microbes in the production of vaccines and antibiotics Further the book presents bacterial products including proteins enzymes immunotoxins and secondary metabolites that target cancer cells and cause tumour regression The chapters also discuss the critical role of gut microbiota dysbiosis in the pathogenesis of autoimmune disease and in bowel related diseases Towards the end the book explores the role of intestinal microbiota in metabolic health and the pathogenesis of common metabolic disorders It presents state of the art insights into important aspects of United Nations Sustainable Developmental Goal 3 *Caught in the CROSS-Fire* Michael Kenneth Wilson, 2025-07-31 There are insidious forces threatening to shape people s lives in ways that may or may not meet with their approval and certainly do not meet with God s the ultimate judge Over many centuries it has been common to name these radical forces as the world the flesh and the devil This book deals with the nature and impact of these highly dangerous forces and what is involved in successfully countering them

Autophagy in plants and algae Diane C Bassham, Jose L Crespo, 2015-05-15 Autophagy also known as macroautophagy is an evolutionarily conserved process by which cytoplasmic components are nonselectively enclosed within a double membrane vesicle known as the autophagosome and delivered to the vacuole for degradation of toxic components and

recycling of needed nutrients This catabolic process is required for the adequate adaptation and response of the cell and correspondingly the whole organism to different types of stress including nutrient starvation or oxidative damage Autophagy has been extensively investigated in yeasts and mammals but the identification of autophagy related ATG genes in plant and algal genomes together with the characterization of autophagy deficient mutants in plants have revealed that this process is structurally and functionally conserved in photosynthetic eukaryotes Recent studies have demonstrated that autophagy is active at a basal level under normal growth in plants and is upregulated during senescence and in response to nutrient limitation oxidative stress salt and drought conditions and pathogen attack Autophagy was initially considered as a non selective pathway but numerous observations mainly obtained in yeasts revealed that autophagy can also selectively eliminate specific proteins protein complexes and organelles Interestingly several types of selective autophagy appear to be also conserved in plants and the degradation of protein aggregates through specific adaptors or the delivery of chloroplast material to the vacuole via autophagy has been reported This research topic aims to gather recent progress on different aspects of autophagy in plants and algae We welcome all types of articles including original research methods opinions and reviews that provide new insights about the autophagy process and its regulation **MacRae's Blue Book** ,1989
