Design-Bid-Build Projects to Assess Productivity Disruption Stephen P. Warhoe, 2013 One of the most important jobs of a project manager is to manage a project's budget and schedule These tasks can easily be very difficult to accomplish on projects that are complex especially since successful project execution relies heavily on people who are expected to perform their roles individually and as a team One of the most difficult aspects of managing projects is estimating how fast and effectively humans will perform a task that is determining how productive workers collectively will be each day each week or within any time period during the life of a project Because projects are unique and are typically one off endeavors there is usually little previous empirical data to rely upon for the project manager to forecast productivity before or during the project's execution The crux of the problem lies with adequately identifying not only the labor work flow process but also the influences that affect the work flow process When scope changes are introduced into the work flow of a project the types and number of influences and their cause and effect relationships can significantly increase in numbers This phenomenon often turns complicated projects into extremely complex ones and the final outcome can be greater than the sum of the individual inputs For project managers who are unable to get their arms around this very real situation forecasting the outcome of a project often becomes out of control especially for projects that are large and heavily labor intensive This study takes a post positivist approach to design and builds a system dynamic model with which construction projects that are delivered using the design bid build methodology can be simulated to show generically how the influences that affect construction projects can affect worker productivity No other studies are known to exist that design or build such a model for construction projects that use the design bid build delivery method The model that was designed in the study is based on the works of several

academics works as well as the input of several experts in the construction field including this study's author. As opposed to attempting to create a simulation model based on the uniqueness of a single project, a mosaic approach was used in creating the model in that elements of the model were identified and taken from studies found through the literature review as well as interviews with construction industry experts. The stock and flow structure of the study's model is intended to be a composite of many construction projects and can be used for any project delivered using the design-bid-build methodology. From the research, the model was created and tested using good modeling practice in that the model testing phase followed the process created by one of the pre-eminent system dynamic modelers in the world. Refer to Sterman 2000. The result is a model that simulates the work flow of labor hours in a design-bid-build construction project which can be affected by an immeasurable number of influences that can and do occur on construction projects.

Calculating Construction Damages William Schwartzkopf, John J. McNamara, 2000-01-01

Calculating construction damages can be complex and confusing. Written by recognized experts in the area of construction claims, Aspen Publishers' *Calculating Construction Damages* is a one-of-a-kind resource providing step-by-step guidelines for valuing a claim and calculating damages. *Calculating Construction Damages* keeps you completely up-to-date with the changes in the construction industry and provides new and updated coverage on:

- Reductions in scope through deductive changes
- The meaning and explanation of acceleration
- The use of the actual cost method and the total cost method to calculate damages
- The effectiveness of expanding on productivity analysis
- The definition of home office overhead costs and the use of the Eichleay formula
- The most recent assessment of attorneys' fees on Miller Act claims

Only Aspen Publishers' *Calculating Construction Damages* leads you through every step you need to take in order to reach an accurate assessment of construction damages. Complete coverage includes:

- General Principles of Damage Calculation
- Labor Costs
- Equipment and Small Tool Costs
- Additional Equipment Costs
- Material Costs
- Bond and Insurance Costs
- Home Office Overhead

Calculating Construction Damages is organized by type of damage rather than type of claim. Its clear mathematical techniques will enable you to value any claim and accurately calculate damages.

MEP Systems Cost Estimating Toolkit: From Foundations to Final Bids Charles Nehme, In the dynamic world of construction, accurate cost estimating is not merely a task; it is an art and a science, a cornerstone of successful project delivery. For Mechanical, Electrical, and Plumbing (MEP) systems, this accuracy becomes even more critical due to their inherent complexity, intricate interdependencies, and significant impact on a building's functionality and operational costs. Far too often, project delays, budget overruns, and even project failures can be traced back to incomplete or imprecise MEP estimates. Having spent years navigating the nuances of construction estimating, from the initial conceptual stages to final bid proposals, I recognized a persistent need for a practical, accessible, and comprehensive resource specifically tailored for MEP systems. This toolkit is born from that observation, a desire to bridge the gap between theoretical knowledge and real-world application. This isn't just another textbook filled with

abstract concepts This is a hands on guide meticulously crafted to provide you with the quick references shortcut tables labor productivity charts and most importantly the pre formatted Excel and Google Sheet templates you need to build robust reliable estimates with confidence We ll delve into the power of RSMeans data explore effective material and labor costing strategies and equip you with the tools to manage risk and deliver accurate bids Whether you are an aspiring estimator a seasoned project manager or an engineer looking to enhance your costing prowess this book is designed to be your indispensable companion It s built to be dog eared highlighted and frequently referenced a living document that evolves with your estimating journey Our goal is to empower you to not just calculate costs but to truly understand them enabling smarter decisions and more profitable projects Welcome to your essential MEP Systems Cost Estimating Toolkit Let s build better estimates together
