Copyright Office, 1968 Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1969 Principles of Polymer Processing Zehev Tadmor, Costas G. Gogos, 2013-12-02 Thoroughly revised edition of the classic text on polymer processing The Second Edition brings the classic text on polymer processing thoroughly up to date with the latest fundamental developments in polymer processing while retaining the critically acclaimed approach of the First Edition Readers are provided with the complete panorama of polymer processing starting with fundamental concepts through the latest current industry practices and future directions

All the chapters have been revised and updated and four new chapters have been added to introduce the latest developments. Readers familiar with the First Edition will discover a host of new material including Blend and alloy microstructuring, Twin screw based melting and chaotic mixing mechanisms, Reactive processing, Devolatilization theory, mechanisms and industrial practice, Compounding theory and industrial practice, The increasingly important role of computational fluid mechanics, A systematic approach to machine configuration design. The Second Edition expands on the unique approach that distinguishes it from comparative texts. Rather than focus on specific processing methods, the authors assert that polymers have a similar experience in any processing machine and that these experiences can be described by a set of elementary processing steps that prepare the polymer for any of the shaping methods. On the other hand, the authors do emphasize the unique features of particular polymer processing methods and machines, including the particular elementary step and shaping mechanisms and geometrical solutions. Replete with problem sets and a solutions manual for instructors, this textbook is recommended for undergraduate and graduate students in chemical engineering and polymer and materials engineering and science. It will also prove invaluable for industry professionals as a fundamental polymer processing analysis and synthesis reference.

The Fourteenth Edition has been updated to reflect the most current technologies. Coverage of additive manufacturing, 3D printing, has been significantly expanded, along with updates on new and advanced materials. Case studies are featured throughout the book, and review problems have been placed at the end of each chapter. A full collection of online bonus material is provided for both students and instructors. DeGarmo's Materials and Processes in Manufacturing, Fourteenth Edition, includes information on Equilibrium phase diagrams and the iron-carbon system, heat treatment, and process capability and quality control. Expendable mold and multiple use mold casting processes, powder metallurgy, particulate processing, fundamentals of metal forming and bulk forming and sheet forming processes, Cutting tool materials, turning and boring processes, milling, drilling, and related hole making processes, and CNC processes and adaptive control in the A4 and A5 levels of automation, Sawing, broaching, shaping, and filing, machining processes, thread and gear manufacturing, and surface integrity and finishing processes. DeGarmo's Materials and Processes in Manufacturing has long

set the standard for introducing students to the materials and processes in product manufacturing and has been incorporated in programs of manufacturing mechanical industrial metallurgical and materials engineering as well as various technology degrees Its descriptive nature provides an excellent first exposure to its various subjects which may then be followed by advanced courses in specific areas
