mobile phones computers and gaming consoles are introduced driving the continued applicability of Moore's law. The semiconductor manufacturing industry is highly dynamic and releases new better and cheaper products day by day. But what happens to long field life products like airplanes or ships which need the same components for decades? How do electronic and also non-electronic systems that need to be manufactured and supported of decades manage to continue operation using parts that were available for a few years at most? This book attempts to answer these questions. This is the only book on the market that covers obsolescence forecasting methodologies including forecasting tactics for hardware and software that enable cost effective proactive product life cycle management. This book describes how to implement a comprehensive obsolescence management system within diverse companies. Strategies to the Prediction Mitigation and Management of Product Obsolescence is a must have work for all professionals in product project management sustainment engineering and purchasing.

Past, Present, Parallel Arthur Trew, Greg Wilson, 2012-12-06

Past Present Parallel is a survey of the current state of the parallel processing industry. In the early 1980s parallel computers were generally regarded as academic curiosities whose natural environment was the research laboratory. Today parallelism is being used by every major computer manufacturer although in very different ways to produce increasingly powerful and cost effective machines. The first chapter introduces the basic concepts of parallel computing the subsequent chapters cover different forms of parallelism including descriptions of vector supercomputers SIMD computers shared memory multiprocessors hypercubes and transputer based machines. Each section concentrates on a different manufacturer detailing its history and company profile the machines it currently produces the software environments it supports the market segment it is targeting and its future plans. Supplementary chapters describe some of the companies which have been unsuccessful and discuss a number of the common software systems which have been developed to make parallel computers more usable. The appendices describe the technologies which underpin parallelism. Past Present Parallel is an invaluable reference work providing up to date material for commercial computer users and manufacturers and for researchers and postgraduate students with an interest in parallel computing.

**Handbook of Research on Emerging Technologies for Effective Project Management** Jamil, George Leal, Ribeiro, Fernanda, Malheiro da Silva, Armando, Maravilhas Lopes, Sérgio, 2019-09-13

Driven by such tools as big data cognitive computing new business models and the internet of things the overall demand for innovation is becoming more critical for competitiveness and emerging technologies. These technologies have become real alternatives for the market and offer new perspectives for modern project management applications. The

Handbook of Research on Emerging Technologies for Effective Project Management is an essential research publication that proposes innovations for firms and markets through the exploration of project management principles and methods and the effective integration of knowledge and innovation. It encompasses academic and scientific propositions, reviews for conceptual bases, applications of theories in new market solutions, and cases of successful insertion of disruptive technologies and business models in new competitive markets. Offering a range of topics such as innovation management, business administration, and marketing, this book is ideal for project managers, IT specialists, software developers, executives, practitioners, managers, marketers, researchers, and industry professionals. **Official Gazette of the United States**

*Near-Earth Laser Communications* Hamid Hemmati, 2018-10-03. Invented more than a hundred years ago by Alexander Graham Bell, the technology of free space optical communications or lasercom has finally reached the level of maturity required to meet a growing demand for operational multi-giga-bit-per-second data rate systems communicating to and from aircrafts and satellites. Putting the emphasis on near earth links including air, LEO, MEO, and GEO orbits, *Near Earth Laser Communications* presents a summary of important free space laser communication subsystem challenges and discusses potential ways to overcome them. This comprehensive reference provides up-to-date information on component and subsystem technologies, fundamental limitations, and approaches to reach those limits. It covers basic concepts and state-of-the-art technologies, emphasizing device technology, implementation techniques, and system trades. The authors discuss hardware technologies and their applications and also explore ongoing research activities and those planned for the near future. The analytical aspects of laser communication have been covered to a great extent in several books. However, a detailed approach to system design and development, including trades on subsystem choices and implications of the hardware selection for satellite and aircraft telecommunications, is missing. Highlighting key design variations and critical differences between them, this book distills decades worth of experience into a practical resource on hardware technologies.
