

Energy Model Worksheet 1a: Qualitative Analysis - Pie Charts

Use pie charts to analyze the energy changes in each situation given.

- Designate your choice of system with a dotted line. Choose your system so that the energies involved are internal (within the system).
- Carefully label the pies to correspond with the positions of the objects given. (A, B, C, etc.)
- The pies should be accurately divided and labeled with the energy storage mechanisms involved.
- Remember the 3 energy questions in deciding about the energy changes:
 1. Where does the energy come from? (What's the source of the energy?)
 2. What does the energy do?
 3. Where does the energy go?

* I chose to make E_{air} so small that it can be ignored. *

Lurie, 2013-03-09 According to established tradition courses on analytical mechanics include general equations of motion of holonomic and non holonomic systems variational principles theory of canonical transformations canonical equations and theory of their integration the Hamilton Jacobi theorem integral in variants theory of last multiplier and others The fundamental laws of mechanics are taken for granted and are not subject to discussion The present book is concerned with those issues of the above listed subjects which in the author's opinion are most closely related to engineering problems Application of the methods of analytical mechanics to non trivial problems at the very stage of constructing the equations requires detailed knowledge of the issues that are normally only briefly touched upon With this perspective considerable attention is paid to ways of introducing the generalised coordinates the theory of finite rotation methods of calculating the kinetic energy the energy of accelerations the potential energy of forces of various nature and the resisting forces These introductory chapters which have to some extent independent significance are followed by those on methods of constructing differential equations of motion for holonomic and non holonomic systems in various forms In these chapters the issues of their interrelations determination of the constraint forces and some problems of analytical statics are discussed as well It is thought useful to include geometric considerations of the motion of a material system as motion of the representative point in Riemannian space

Mechanical & Allied Engineering Solved Papers YCT Expert Team , 2023 24 RRB JE Mechanical Allied Engineering Solved Papers Introduction to Nanoelectronic Single-Electron Circuit Design Jaap Hoekstra,2016-10-14 Today the concepts of single electron tunneling SET are used to understand and model single atom and single molecule nanoelectronics The characteristics of nanoelectronic devices especially SET transistors can be understood on the basis of the physics of nanoelectronic devices and circuit models A circuit theory approach is necessary for considering possible integration with

current microelectronic circuitry To explain the properties and possibilities of SET devices this book follows an approach to modeling these devices using electronic circuit theory All models and equivalent circuits are derived from the first principles of circuit theory Based on energy conservation the circuit model of SET is an impulsive current source and modeling distinguishes between bounded and unbounded currents The Coulomb blockade is explained as a property of a single junction In addition this edition differs from the previous one by elaborating on the section on spice simulations and providing a spice simulation on the SET electron box circuit including the spice netlist Also a complete new proof of the two capacitor problem in circuit theory is presented the importance of this proof in understanding energy conservation in SET circuits cannot be underestimated This book will be very useful for advanced undergraduate and graduate level students of electrical engineering and nanoelectronics and researchers in nanotechnology nanoelectronic device physics and computer science Only book modeling both single electron tunneling and many electron tunneling from the points of view of electronics starting from experiments via a physics description working towards a circuit description and based on energy conservation in electrical circuits developing the impulse circuit model for single electron tunneling
