Much of this research has been fueled by their potential for use in regenerative medicine applications which has in turn spurred growing numbers of translational and clinical studies. However, more work is needed if the potential is to be realized for improvement of the lives and well being of patients with numerous diseases and conditions. This book series Cell Biology and Translational Medicine CBTMED as part of Springer Nature's longstanding and very successful Advances in Experimental Medicine and Biology book series has the goal to accelerate advances by timely information exchange. Emerging areas of regenerative medicine and translational aspects of stem cells are covered in each volume. Outstanding researchers are recruited to highlight developments and remaining challenges in both the basic research and clinical arenas. This current book is the third volume of a continuing series. **Autophagy: from Big Data to Physiological Significance** Ioannis Nezis, Sovan Sarkar, Maria Ines Vaccaro, 2020-02-10 *Encyclopedia of Immunobiology*, 2016-04-27 Encyclopedia of Immunobiology Five Volume Set provides the largest integrated source of immunological knowledge currently available. Dental and Periodontal Tissues Formation and Regeneration: Current Approaches and Future Challenges Giovanna Orsini,Victor E. Arana-Chavez,Thimios Mitsiadis,2016-10-07 Sequential and reciprocal interactions between oral epithelial and cranial neural crest derived mesenchymal cells give rise to the teeth and periodontium Teeth are vital organs containing a rich number of blood vessels and nerve fibers within the dental pulp and periodontium Teeth are composed by unique and specific collagenous dentin fibrillar cementum and non collagenous enamel highly mineralized extracellular matrices Alveolar bone is another collagenous hard tissue that supports tooth stability and function through its close interaction with the periodontal ligament Dental hard tissues are often damaged after infection or traumatic injuries that lead to the partial or complete destruction of the functional dental and supportive tissues Well established protocols are routinely used in dental clinics for the restoration or replacement of the damaged tooth and alveolar bone areas Recent progress in the fields of cell biology tissue engineering and nanotechnology offers promising opportunities to repair damaged or missing dental tissues Indeed pulp and periodontal tissue regeneration is progressing rapidly with the application of stem cells biodegradable scaffolds and growth factors Furthermore methods that enable partial dental hard tissue repair and regeneration are being evaluated with variable degrees of success However these cell based therapies are still incipient and many issues need to be addressed before any clinical application The understanding of tooth and periodontal tissues formation would be beneficial for improving regenerative attempts in dental clinics In the present e book we have covered

the various aspects dealing with dental and periodontal tissues physiology and regeneration in 6 chapters 1 General principles on the use of stem cells for regenerating craniofacial and dental tissues 2 The roles of nerves vessels and stem cell niches in tissue regeneration 3 Dental pulp regeneration and mechanisms of various odontoblast functions 4 Dental root and periodontal physiology pathology and regeneration 5 Physiology and regeneration of the bone using various scaffolds and stem cell populations 6 Physiology pathology and regeneration of enamel using dental epithelial stem cells *The 11th Edition of the International Meeting of the SPCE-TC: Advances in Stem Cells and Cell Therapies* Susana Solá,Joana Paiva Miranda,2021-09-14
