## Section: Urban Land Use

Read the passage below and answer the questions that follow.

Environmental conditions in the center of a city are different from those of the surrounding countryside. Cities both generate and trap more heat. The increased temperature in the city is called a **heat island**. Heat is generated by the infrastructure that makes a city run. Roads and buildings absorb more heat than vegetation does. They also retain heat longer. Atlanta, Georgia, is an example of a city that has a significant heat island.

Scientists are beginning to see that heat islands can affect local weather patterns. Hot air rises over a city, cooling as it rises, and eventually produces rain clouds. In Atlanta and many other cities, increased rainfall is a side effect of the heat island. The heat island effect may be moderated by planting trees for shade and by installing rooflops that reflect rather than retain heat.

**Subject Guide to Books in Print** ,1997      **Bibliographies and Literature of Agriculture** ,1978      **The Real Cost of Cheap Food** Michael Carolan, 2013-10-30 This challenging but accessible book critically examines the dominant food regime on its own terms by seriously asking whether we can afford cheap food and exploring what exactly cheap food affords us Detailing the numerous ways that food has become reduced to a state such as a price per ounce combination of nutrients yield per acre or calories the book argues for a more contextual understanding of food when debating its affordability The author makes a compelling case for why today's global food system produces just the opposite of what it promises The food produced under this regime is in fact exceedingly expensive Thus meat production and consumption are inefficient uses of resources and contribute to climate change the use of pesticides in industrial scale agriculture may produce cheap food but there are hidden costs to environmental protection human health and biodiversity conservation Many of these costs will be paid for by future generations cheap food today may mean expensive food tomorrow By systematically assessing these costs

the book delves into issues related but not limited to international development national security health care industrial meat production organic farming corporate responsibility government subsidies food aid and global commodity markets The book concludes by suggesting ways forward going beyond the usual solutions such as farmers markets community supported agriculture and community gardens Exploding the myth of cheap food requires we have at our disposal a host of practices and policies Some of those proposed and explored include microloans subsidies for consumers vertical agriculture and the democratization of subsidies for producers
