**Mathematical Problem Solving** ALAN H. SCHOENFELD,2014-06-28 This book is addressed to people with research interests in the nature of mathematical thinking at any level to people with an interest in higher order thinking skills in any domain and to all mathematics teachers The focal point of the book is a framework for the analysis of complex problem solving behavior That framework is presented in Part One which consists of Chapters 1 through 5 It describes four qualitatively different aspects of complex intellectual activity cognitive resources the body of facts and procedures at one's disposal heuristics rules of thumb for making progress in difficult situations control having to do with the efficiency with which individuals utilize the knowledge at their disposal and belief systems one's perspectives regarding the nature of a discipline and how one goes about working in it Part Two of the book consisting of Chapters 6 through 10 presents a series of empirical studies that flesh out the analytical framework These studies document the ways that competent problem solvers make the most of the knowledge at their disposal They include observations of students indicating some typical roadblocks to success Data taken from students before and after a series of intensive problem solving courses document the kinds of learning that can result from carefully designed instruction Finally observations made in typical high school classrooms serve to indicate some of the sources of students often counterproductive mathematical behavior      **Learning Directory** ,1972

*Structural Learning (Volume 2)* Joseph M. Scandura, 2017-09-13 Originally published in 1976 this title is an edited volume and reflects the major approaches being taken in structural learning at the time Chapter 1 deals with the basic question of whether competence knowledge should be characterized in terms of rules automata on the one hand or associations on the other The bulk of Chapter 2 is devoted to a series of earlier experiments on rule learning by the editor and his associates The two contributions in Chapter 3 deal with graph theoretical models Piagetian models constitute the subject of Chapter 4 Chapter 5 deals with attempts to stimulate human behaviour with a computer Chapter 6 ranges over a wide variety of competence models with particular reference to logic and mathematics In Chapter 7 the editor proposes a new theory of structural learning together with some empirical results

**Large-Scale Studies in Mathematics Education** James A. Middleton, Jinfa Cai, Stephen Hwang, 2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning developmentally taking into account cohort factors issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community In fact currently there is no volume devoted to discussion of issues related to large scale studies and to report findings from them This volume is unique as it directly discusses methodological issue in large scale studies and reports empirical data from large scale studies
