Computer Vision - ECCV 2004 Tomas Pajdla, Jiri Matas, 2004-05-11 Welcome to the proceedings of the 8th European Conference on Computer Vision Following a very successful ECCV 2002 the response to our call for papers was almost equally strong 555 papers were submitted We accepted 41 papers for oral and 149 papers for poster presentation Several innovations were introduced into the review process First the number of program committee members was increased to reduce their review load We managed to assign to program committee members no more than 12 papers Second we adopted a paper ranking system Program committee members were asked to rank all the papers assigned to them even those that were reviewed by additional reviewers Third we allowed authors to respond to the reviews consolidated in a discussion involving the area chair and the reviewers Fourth their reports, their reviews and their responses were made available to the authors as well as to the program committee members Our aim was to provide the authors with maximal feedback and to let the program committee members know how authors reacted to their reviews and how their reviews were or were not reflected in the final decision Finally we reduced the length of reviewed papers from 15 to 12 pages

The preparation of ECCV 2004 went smoothly thanks to the efforts of the organizing committee, the area chairs, the program committee and the reviewers We are indebted to Anders Heyden, Mads Nielsen and Henrik J Nielsen for passing on ECCV traditions and to Dominique Asselineau from ENST TSI who kindly provided his GestRFIA conference software We thank Jan Olof Eklundh and Andrew Zisserman for encouraging us to organize ECCV 2004 in Prague

Generalized Solutions of Operator Equations and Extreme Elements D.A. Klyushin, S.I. Lyashko, D.A. Nomirovskii, Yu.I. Petunin, Vladimir Semenov, 2011-10-05 Abstract models for many problems in science and engineering take the form of an operator equation The resolution of these problems often requires determining the existence and uniqueness of solutions to these equations Generalized Solutions of Operator Equations and Extreme Elements presents recently obtained results in the study of the generalized solutions of operator equations and extreme elements in linear topological spaces The presented results offer new methods of identifying these solutions and studying their properties These new methods involve the application of a priori estimations and a general

topological approach to construct generalized solutions of linear and nonlinear operator equations The monograph is intended for mathematicians graduate students and researchers studying functional analysis operator theory and the theory of optimal control *A Brief Course in Analytic Geometry and the Elements of Curve-fitting* Walter Burton Ford, Raymond Walter Barnard, 1924 Children's Books in Print R R Bowker Publishing, Bowker, 1999-12 Paperbacks in Print , 1975
