Mohamed, 2024-02-07 The majority of global seafood production and mariculture activities take place in marine coastal water bodies especially in areas of high primary productivity from microalgae and plankton This productivity sustains many forms of ecosystem services and promotes carbon dioxide absorption However climate change ocean warming acidification oxygen loss etc and anthropogenic disturbances nutrients intrusion aquaculture have influenced the microalgae plankton community assemblage and shifted it into a highly productive zone causing a severe impact on the marine ecosystem such as an increase in Harmful Algal Blooms dead zone expansions and coral algal phase shifts So far there is still little knowledge on the mechanisms of microalgae plankton community response to these changing environmental conditions Harmful microalgae impair the marine ecosystem through the production of the so called shellfish toxins which cause shellfish contamination and poisoning to the vertebrates including humans In addition some microalgae produce fish killing toxins ichthyotoxins causing increasing damage to marine aquaculture Besides that the high productivity bloom of microalgae in the water due to coastal

eutrophication from anthropogenic activities is known to induce hypoxic anoxic conditions causing a severe economic impact on aquaculture

Birds and Climate Change James W. Pearce-Higgins, Rhys E. Green, 2014-06-12 From the red grouse to the Ethiopian bush crow bird populations around the world can provide us with vital insights into the effects of climate change on species and ecosystems They are among the best studied and monitored of organisms yet many are already under threat of extinction as a result of habitat loss overexploitation and pollution Providing a single source of information for students scientists practitioners and policy makers this book begins with a critical review of the existing impacts of climate change on birds including changes in the timing of migration and breeding and effects on bird populations around the world The second part considers how conservationists can assess potential future impacts quantifying how extinction risk is linked to the magnitude of global change and synthesising the evidence in support of likely conservation responses The final chapters assess the threats posed by efforts to reduce the magnitude of climate change

Adaptive management of fisheries in response to climate change Bahri, T., Vasconcellos, M., Welch, D.J., Johnson, J., Perry, R.I., Ma, X. & Sharma, R., 2021-02-01 This report aims to accelerate climate change adaptation implementation in fisheries management throughout the world It showcases how flexibility can be introduced in the fisheries management cycle in order to foster adaptation strengthen the resilience of fisheries reduce their vulnerability to climate change and enable managers to respond in a timely manner to the projected changes in the dynamics of marine resources and ecosystems The publication includes a set of good practices for climate adaptive fisheries management that have proven their effectiveness and can be adapted to different contexts providing a range of options for stakeholders including the fishing industry fishery managers policymakers and others involved in decision making These good practices were linked to one or more of the three common climate related impacts on fisheries resources distributional change productivity change and species composition change Therefore these three impacts can serve as practical entry

points to guide decision makers in identifying good practice adaptation measures suitable for their local contexts These good practices are based upon transferable experiences and lessons learned from the thirteen case studies across the globe and hopefully will contribute to greater uptake and implementation of climate adaptive fisheries management measures on the ground
