Individual Development And Evolution The Genesis Of Novel Behavior:

Individual Development and Evolution Gilbert Gottlieb, 2001-09-01 This work is intended to portray the interrelationship of heredity individual development and the evolution of species in a way that can be understood by nonspecialists In striving to offer a straightforward historical exposition of the complex topic of nature and nurture the author tells the story through a central cast of characters beginning with Lamarck in 1809 and ending with a synthesis of his own that depicts how extragenetic behavioral changes in individual development could be the first stages in the pathway leading to evolutionary change On the way to that goal he describes relevant conceptual aspects of genetics embryological development and evolutionary biology in a nontechnical and accurate way for students and colleagues in the behavioral and social sciences The book presents a highly selected review as a prelude to the description of a developmental theory of the phenotype in which behavioral change leads eventually to evolutionary change This book grew out of an invited interdisciplinary course of lectures for advanced undergraduate and graduate students at the University of Colorado Boulder Presenting the various ways about thinking about heredity individual development and evolution the author had three goals in mind to establish the relevance of individual development to the evolution of species to describe the most appropriate way to think about or conceptualize heredity in relation to individual development to show that this somewhat unorthodox manner of conceptualizing heredity and individual development gives rise to a new way to think about the behavioral pathway leading to evolution In conclusion the present work will provide a contribution toward the possible dissolution of the nature nurture dichotomy as well as a contribution to evolutionary theory *Conceptions of Development* D.J. Lewkowicz, R.

Nature and Nurture Cynthia Garcia Coll, Elaine L. Bearer, Richard M. Lerner, 2014-04-04 What does it mean to find a gene or set of genes that are associated with ADHD schizophrenia or autism Could we eradicate such diseases from our species through gene therapy Is it possible to eradicate from our genome the genetic material that predisposes us to be too aggressive too shy less intelligent or not active enough Who has the political power and or moral authority to make these decisions The premise of *Nature and Nurture* is that the complexity of the transactions between nature and nurture between genes and the environment from the cellular to the

cultural level make these questions incredibly complex and in need of careful attention by educators scientists the public and policymakers A product of the conference held at Brown University in 2001 this book suggests that genes and environments work together interactively in a complex and closely intertwined fashion The contributors to this book biologists psychologists psychiatrists and economists present knowledge that enables research and application to transcend the traditional question of whatever variance or significance is attributed to genetics versus environment in the development of a particular behavioral trait This book presents a variety of views on the current status of knowledge about the ways in which dynamic developmental mutually interactive systems in the genetic and environmental domains operate The chapters represent contributions from different perspectives **Origins of the Social Mind** Bruce J. Aggression and Violence David M. Stoff, Robert B. Cairns, 2014-02-04 Conceived at a time when biological research on aggression and violence was drawn into controversy because of sociopolitical questions about its study this volume provides an up to date account of recent biological studies performed mostly on humans A group of scientists recognized the importance of freedom of inquiry and deemed it vital to address the most promising biological research in the field The focus on biological mechanisms is not meant to imply that biological variables are paramount as a determinant of violence Rather biological variables operate in conjunction with other variables contributing to aggression or violence and a complete understanding of this phenomenon requires consideration of all influences bearing on it This book will familiarize readers with the rapidly growing and increasingly significant body of knowledge on the biological bases of human antisocial aggressive and violent behaviors The editors concentrated on biological influences that support the basic physiological and biochemical processes of the brain and did not cover those biological influences that impact on the health of the individual such as head injury pregnancy and birth complications diet and exposure to lead and other toxins They focused on biological influences to illuminate their role in the complex behavioral phenomenon of violence Three different approaches to the biological study of human antisocial aggressive and violent behaviors are represented genetic neurobiological and biosocial Representing each of these three approaches individual chapters from investigators in psychobiology biological psychiatry and basic clinical neurosciences address the most recent experimental findings methods theory and common misconceptions in the biological study of aggression and violence The areas of primary focus are behavior and molecular genetics neurochemistry and hormones neuroimaging psychophysiology and developmental psychobiology Generally speaking investigators following these different approaches have experience in different scientific backgrounds select different methods generate different analyses employ different conceptual definitions for some of the same terms and assume a different philosophical stance in attempting to explain violence Nevertheless all are united in their efforts to understand the biological underpinnings of violence This book then assumes a comprehensive approach wherein different levels of analysis and different approaches inform each other It is clear from the studies reported that aggression and violence are multidetermined phenomena and understanding them requires an interdisciplinary approach spanning economic sociopolitical psychological sociological and criminological as well as biomedical considerations Nature biology and nurture experience context are fundamentally inseparable in explaining aggression and violence biology may affect experience or context but experience or context also influences biology Both need to be studied in a search for explanations of this phenomena
