- a. Attach the top cord of the fixture to the chain. If not, remove the loose end and the top cord from the fixture (Figure 2), and then repeat the steps. The top cord and the rest of the chain must be evenly tightened.
- The swing lock chain allows the top cord of the fixture to swing naturally during the two positions on the underside of the support. To adjust the tightness of the cord on the chain, follow the procedure described below.
- a-1. Turn the locknut counter-clockwise to loosen it.
- a-2. While checking the tightness of the cord, tighten the adjusting nut at the desired position.
- Before tightening the locknut, check the position of the position mark on the adjusting nut and the T nut.
- a-3. In order for the cord to swing more naturally, the position mark on the adjusting nut should face the top of the chain, as shown in Fig. 3. Also, make sure that the T nut will not interfere with any of the fit cord.
- a-4. Tighten the locknut, draw the T nut of the chain to secure the top end at the desired position.

21. If you go off the ground and feeling of the top control panel with your left hand, you can accurately find out on the scale of the adjusting nut. When the first members are used, it is unnecessary to check the direction of the position mark. The protection shows clear sign of when it becomes necessary to adjust. The actual clearance to the cylinder, piston and crank should be checked from all sides.
