

MARK SCHEME for the May/June 2013 series

9709/21

9709 MATHEMATICS

Paper 2, maximum raw mark 50

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

by Peter Mattock *Conceptual Maths Teaching* about rather than just how to do mathematics in schools aims to empower teachers to support students on a comprehensive and coherent journey through school mathematics. Showcasing the best models, metaphors and representations, it provides excellent examples, explanations and exercises that can be used across the curriculum. Concepts are at the heart of the study of mathematics. They are the ideas that remain constant whenever they are encountered but which combine and build upon each other to create the mathematical universe. It is the structure of each concept that gives rise to the procedures that are used in calculation and problem solving and by learning about these structures a learner can make sense of how different processes work and use them flexibly as need demands. In his first book *Visible Maths*, Peter Mattock focused on the use of representations and manipulatives as images and tools and how this can provide a window into some of these mathematical structures. His aim in *Conceptual Maths* is to go deeper beyond the procedures and to shed greater light on the structures of the subject's different concepts. The book explores how a variety of visual tools and techniques can be used in the classroom to deepen pupils' understanding of mathematical structures, concepts and operations including number, addition and subtraction, multiplication and division, and factors, proportionality, functionality, measures, accuracy, probability, shape and transformation, and vectors among many others. In so doing, Peter equips teachers with the confidence and practical know-how to help learners assimilate knowledge of mathematical concepts into their schema and take their learning to the next level. Containing numerous full-colour diagrams and models to illustrate the conceptual takeaways and teaching techniques discussed, *Conceptual Maths* also includes a glossary covering the key mathematical terms. Suitable for teachers of maths in primary, secondary and post-16 settings.

Using Film and Media in the Language Classroom Carmen Herrero, Isabelle Vanderschelden, 2019-07-11. This book demonstrates the positive impact of using film and audiovisual material in the language classroom. The chapters are evidence-based and address different levels and contexts of learning around the world. They demonstrate the benefits of using moving images and films to develop intercultural awareness and promote multilingualism and suggest Audiovisual Translation (AVT) activities and projects to enhance language learning. The book will be a valuable continuing professional development resource for language teachers and those involved in curriculum development as well as bringing the latest research theory and pedagogical techniques to teacher training courses.
