Chapter 6
Mean–Variance Portfolio Theory

1. (Shorting with margin) The money invested is X_0. The money received at the end of a year is $X_0 - X_1 + X_0$. Hence,

$$R = \frac{2X_0 - X_1}{X_0}.$$

2. (Dice product) Let a and b be the outcomes of two die rolls. Then $Z = ab$. By independence, we know

$$E[ab] = E[a]E[b]$$
$$\text{and } \operatorname{var}[Z] = E[a^2]E[b^2] - (E[a]E[b])^2$$
$$\approx 79.97$$

3. (Two correlated assets) For solution method, see solution to problem called Two stocks (below).

   (a) α equals 19/23.
   (b) The minimum standard deviation is approximately 13.7%.
   (c) The expected return of this portfolio is approximately 11.4%.

4. (Two stocks) Let α, β equal the percent of investment in stock 1 and stock 2, respectively. The problem is

$$\min_{\alpha,\beta} \alpha^2 \sigma_1^2 + \beta^2 \sigma_2^2 + 2\alpha\beta\sigma_{12}$$

$$\text{subject to } \alpha + \beta = 1.$$

Setting up the Lagrangian, L, we have:

$$L = \alpha^2 \sigma_1^2 + \beta^2 \sigma_2^2 + 2\alpha\beta\sigma_{12} - \lambda(\alpha + \beta - 1)$$

The first order necessary conditions are:

$$0 = \frac{\partial L}{\partial \alpha} = 2\alpha\sigma_1^2 + 2\beta\sigma_{12} - \lambda$$

Panaretos,Yoav Zemel,2020-03-10 This open access book presents the key aspects of statistics in Wasserstein spaces i e statistics in the space of probability measures when endowed with the geometry of optimal transportation Further to reviewing state of the art aspects it also provides an accessible introduction to the fundamentals of this current topic as well as an overview that will serve as an invitation and catalyst for further research Statistics in Wasserstein spaces represents an emerging topic in mathematical statistics situated at the interface between functional data analysis where the data are functions thus lying in infinite dimensional Hilbert space and non Euclidean statistics where the data satisfy nonlinear constraints thus lying on non Euclidean manifolds The Wasserstein space provides the natural mathematical formalism to describe data collections that are best modeled as random measures on Euclidean space e g images and point processes Such random measures carry the infinite dimensional traits of functional data but are intrinsically nonlinear due to positivity and integrability restrictions Indeed their dominating statistical variation arises through random deformations of an underlying template a theme that is pursued in depth in this monograph **Trust Region Methods** A. R. Conn,N. I. M. Gould,Ph. L. Toint,2000-01-01 This is the first comprehensive reference on trust region methods a class of numerical algorithms for the solution of nonlinear convex optimization methods Its unified treatment covers both unconstrained and constrained problems and reviews a large part of the specialized literature on the subject It also provides an up to date view of numerical optimization Control and Dynamic Systems V17 C.T. Leonides,2012-12-02 Control and Dynamic Systems Advances in Theory and Application Volume 17 deals with the theory of differential games and its applications It provides a unique presentation of the differential game theory as well as the use of algorithms for solving this complex class problems This book discusses fundamental concepts and system problem formulation for differential game systems It also considers pursuit evasion games and on line real time computer control techniques This book will serve as a useful reference for those interested in effective computations for differential games *High-Performance Computing in Finance* M. A. H. Dempster,Juho Kanniainen,John Keane,Erik Vynckier,2018-02-21 High Performance Computing HPC delivers higher computational performance to solve problems in science engineering and finance There are various HPC resources available for different needs ranging from cloud computing that can be used without much expertise and expense to more tailored hardware such as Field Programmable Gate Arrays FPGAs or D Wave s quantum computer systems High Performance Computing in Finance is the first book that provides a state of the art introduction to HPC for finance capturing both academically and practically relevant problems Risk-sensitive Investment Management Mark H A Davis,Sebastien Lleo,2014-07-21 Over the last two decades risk sensitive control has evolved into an innovative and successful framework for

solving dynamically a wide range of practical investment management problems This book shows how to use risk sensitive investment management to manage portfolios against an investment benchmark with constraints and with assets and liabilities It also addresses model implementation issues in parameter estimation and numerical methods Most importantly it shows how to integrate jump diffusion processes which are crucial to model market crashes With its emphasis on the interconnection between mathematical techniques and real world problems this book will be of interest to both academic researchers and money managers Risk sensitive investment management links stochastic control and portfolio management Because of its distinct emphasis on integrating advanced theoretical concepts into practical dynamic investment management tools this book stands out from the existing literature in fundamental ways It goes beyond mainstream research in portfolio management in a traditional static setting The theoretical developments build on contemporary research in stochastic control theory but are informed throughout by the need to construct an effective and practical framework for dynamic portfolio management This book fills a gap in the literature by connecting mathematical techniques with the real world of investment management Readers seeking to solve key problems such as benchmarked asset management or asset and liability management will certainly find it useful **Model-Based Fault Diagnosis Techniques** Steven X. Ding,2012-12-20 Guaranteeing a high system performance over a wide operating range is an important issue surrounding the design of automatic control systems with successively increasing complexity As a key technology in the search for a solution advanced fault detection and identification FDI is receiving considerable attention This book introduces basic model based FDI schemes advanced analysis and design algorithms and mathematical and control theoretic tools This second edition of Model Based Fault Diagnosis Techniques contains new material on fault isolation and identification and alarm management extended and revised treatment of systematic threshold determination for systems with both deterministic unknown inputs and stochastic noises addition of the continuously stirred tank heater as a representative process industrial benchmark and enhanced discussion of residual evaluation which now deals with stochastic processes Model based Fault Diagnosis Techniques will interest academic researchers working in fault identification and diagnosis and as a text it is suitable for graduate students in a formal university based course or as a self study aid for practising engineers working with automatic control or mechatronic systems from backgrounds as diverse as chemical process and power engineering   Robust Control Farhad Assadian,Kevin R. Mallon,2022-01-28 Robust Control Robust Control Youla Parameterization Approach Discover efficient methods for designing robust control systems In Robust Control Youla Parameterization Approach accomplished engineers Dr Farhad Assadian and Kevin R Mallon deliver an insightful treatment of robust control system design that does not require a theoretical background in controls The authors connect classical control theory to modern control concepts using the Youla method and offer practical examples from the automotive industry for designing control systems with the Youla method The book demonstrates that feedback control can be elegantly designed in the frequency domain using the

Youla parameterization approach It offers deep insights into the many practical applications from utilizing this technique in both Single Input Single Output SISO and Multiple Input Multiple Output MIMO design Finally the book provides an estimation technique using Youla parameterization and controller output observer for the first time Robust Control offers readers A thorough introduction to a review of the Laplace Transform including singularity functions and transfer functions Comprehensive explorations of the response of linear time invariant and dynamic systems as well as feedback principles and feedback design for SISO Practical discussions of norms and feedback systems feedback design by the optimization of closed loop norms and estimation design for SISO using the parameterization approach In depth examinations of MIMO control and multivariable transfer function properties Perfect for industrial researchers and engineers working with control systems Robust Control Youla Parameterization Approach is also an indispensable resource for graduate students in mechanical aerospace electrical and chemical engineering **Linear Optimization and Approximation** K. Glashoff,S.-A. Gustafson,2012-12-06 A linear optimization problem is the task of minimizing a linear real valued function of finitely many variables subject to linear con straints in general there may be infinitely many constraints This book is devoted to such problems Their mathematical properties are investi gated and algorithms for their computational solution are presented Applications are discussed in detail Linear optimization problems are encountered in many areas of appli cations They have therefore been subject to mathematical analysis for a long time We mention here only two classical topics from this area the so called uniform approximation of functions which was used as a mathematical tool by Chebyshev in 1853 when he set out to design a crane and the theory of systems of linear inequalities which has already been studied by Fourier in 1823 We will not treat the historical development of the theory of linear optimization in detail However we point out that the decisive break through occurred in the middle of this century It was urged on by the need to solve complicated decision problems where the optimal deployment of military and civilian resources had to be determined The availability of electronic computers also played an important role The principal computational scheme for the solution of linear optimization problems the simplex algorithm was established by Dantzig about 1950 In addi tion the fundamental theorems on such problems were rapidly developed based on earlier published results on the properties of systems of linear inequalities *Paper* ,1994
