Moschkovich, Marta Civil, 2011-05-01 This book that explores the mathematics education of Latinos/as in 13 original research studies Each chapter represents research that grounds mathematics instruction for Latinos/as in the resources to be found in culture and language By inverting the deficit perspective this volume redresses the shortcomings found in the previous literature on Latino learners Each study frames language e.g. bilingualism not as an obstacle to learning but as a resource for mathematical reasoning Other chapters explore the notion of cultural variation not as a liability but as a tool for educators to build upon in the teaching of mathematics Specifically the book reframes culture as a focus on the practices objects

inscriptions or people that connect mathematical concepts to student thinking and experiences both in and out of school The book's four sections divide the research The first section of the book focuses on mathematic learning in classrooms specifically exploring bilingual Latino students the second section explores Latino learners in communities including the role parents can play in advancing learning the third section includes chapters focused on teacher professional growth the final section concerns the assessment and mis assessment of Latino learners The research shared in this volume provides ample evidence that mathematics educators who choose to ignore language or culture in their pedagogy risk shortchanging their Latino students
