Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4 8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0

Emergent Bilinguals formerly known as English Language Learners are one of the fastest growing subgroups in the United States. Their educational needs are not well met by the educational system. In this book, we report results of empirical multiyear studies about their reading and mathematics performance both at the elementary school and high school levels. Given that state education agencies collect enormous amounts of information that are typically not well analyzed, this book serves as an exemplar of secondary data analyses. Educational leaders, educational researchers, and legislators and policymakers will find the chapters in this book useful. Findings from these statewide analyses can provide readers with baselines of the performance of Emergent Bilingual students prior to the Covid 19 pandemic in reading and in mathematics. Changes in instructional practices and in educational programming could be made based upon the numerous statistical results present in this book.
