2 Factorise completely.

$$kp + 3k + mp + 3m$$

$$k(p+3) + m(p+3) = (k+m)(p+3)$$

Answer $(k+m)(p+3)$ [2]

3 The first five terms of a sequence are shown below.

$$13 \quad 9 \quad 5 \quad 1 \quad -3$$

$$\quad \quad -4 \quad -4 \quad -4 \quad -4$$

Find the n th term of this sequence.

$$T(n) = -4n + c$$

$$T(1) = -4 + c = 13$$

$$c = 17$$

$$T(n) = -4n + 17$$

The Irreducible Subgroups of Exceptional Algebraic Groups Adam R. Thomas,2021-06-18 This paper is a contribution to the study of the subgroup structure of exceptional algebraic groups over algebraically closed fields of arbitrary characteristic Following Serre a closed subgroup of a semisimple algebraic group G is called irreducible if it lies in no proper parabolic subgroup of G In this paper we complete the classification of irreducible connected subgroups of exceptional algebraic groups providing an explicit set of representatives for the conjugacy classes of such subgroups Many consequences of this classification are also given These include results concerning the representations of such subgroups on various G modules for example the conjugacy classes of irreducible connected subgroups are determined by their composition factors on the adjoint module of G with one exception A result of Liebeck and Testerman shows that each irreducible connected subgroup X of G has only finitely many overgroups and hence the overgroups of X form a lattice We provide tables that give representatives of each conjugacy class of connected overgroups within this lattice structure We use this to prove results concerning the subgroup structure of G for example when the characteristic is 2 there exists a maximal connected subgroup of G containing a conjugate of every irreducible subgroup A_1 of G

Covert,2021-06-21 Erdős asked how many distinct distances must there be in a set of n points in the plane Falconer asked a continuous analogue essentially asking what is the minimal Hausdorff dimension required of a compact set in order to guarantee that the set of distinct distances has positive Lebesgue measure in $\mathbb{R}$ The finite field distance problem poses the analogous question in a vector

space over a finite field The problem is relatively new but remains tantalizingly out of reach This book provides an accessible exciting summary of known results The tools used range over combinatorics number theory analysis and algebra The intended audience is graduate students and advanced undergraduates interested in investigating the unknown dimensions of the problem Results available until now only in the research literature are clearly explained and beautifully motivated A concluding chapter opens up connections to related topics in combinatorics and number theory incidence theory sum product phenomena Waring's problem and the Kakeya conjecture

Ω-Bibliography of Mathematical Logic Heinz-Dieter Ebbinghaus, 2013-06-29 Gert H M ller The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect In addition given the rapidly growing sophistica tion specialization and hence subdivision of logic researchers students and teachers may have a hard time getting an overview of the existing literature partic ularly if they do not have an extensive library available in their neighbourhood they simply do not even know what to ask for More specifically if someone vaguely knows that something vaguely connected with his interests exists some where in the literature he may not be able to find it even by searching through the publications scattered in the review journals Answering this challenge was and is the central motivation for compiling this Bibliography The Bibliography comprises presently the following six volumes listed with the corresponding Editors
