### **Math Mammoth Multiplication 2**

Maria Miller,2024-04-24 Math Mammoth Multiplication 2 is a worktext focusing on multi digit multiplication and related topics It best suits fourth grade mathematics The first lessons briefly review the concept of multiplication and the multiplication tables Next students encounter equations in disguise presented with shapes on both sides of a pan balance in the lesson Scales Puzzles This lesson is intended to be fun and motivational Then the focus shifts to multi digit multiplication also called multiplication algorithm or multiplying in columns We start out by learning to multiply numbers by multiples of ten and hundred for example 20 4 or 500 6 After this is mastered students learn the very important concept of multiplying in parts or partial products This means that for example we multiply 4 63 in two parts first we multiply 4 60 240 and 4 3 12 and lastly the results are added 240 12 252 This principle

underlies all other multiplication algorithms so it is important to master We don't want children to blindly memorize the multiplication algorithm without understanding what is going on with it The partial products algorithm multiplying in parts also ties in with an area model and it is very important that students see the connection between this visual model and the procedure The book contains two lessons about multiplying in columns the easy way This easy way is a simplified form of the traditional multiplication algorithm based on partial products You may skip these two lessons at your discretion The method taught in those lessons is most useful for students who may have trouble with the traditional form of the algorithm This method is also helpful in cementing the student's understanding of the partial products method The traditional or standard form of multiplication algorithm is taught next and is hopefully fairly easy with the partial products as a foundation Students also study estimation the order of operations and multiplying with money There are numerous word problems in all of the lessons Students are encouraged to write number sentences for the word problems essentially learning to show their work and their thinking process The lesson So Many of the Same Thing has to do with proportional reasoning The idea is really simple and prepares students for learning ratios and proportions in middle school The last major topic in the book is multiplying two digit numbers by two digit numbers Again we first study partial products and tie that in with an area model The lesson Multiplying in Parts Another Way is optional Lastly the book teaches the standard algorithm for two digit by two digit multiplication Students will practice multiplication with more digits in the book Mammoth Multiplication Division 3

*Math Mammoth Foundational Word Problems* Maria Miller,2023-07-20 Math Mammoth Foundational Word Problems is a workbook intended for students in 3rd grade and above that need more practice with word problems I especially aim to help students in 4th 7th grades who have trouble with word problems and who need to go back to the beginning so to speak to learn to solve them The problems are generally based on a knowledge of third grade math such as regrouping in addition and subtraction the multiplication tables concept of division and calculating change The problems do not require long multiplication long division or calculations with fractions or decimals with the exception of money amounts The worksheets have examples and some instruction about common strategies for word problems Students are often encouraged to write down the calculations they do They are also encouraged to make a drawing or a sketch of the situation in the problem to help them understand the situation and to see what math operation is involved Overall most of the problems require two or more steps however some problem sets focus on differentiating what math operation should be used and those only require a single step Several problem sets are designed to help students to master problems that involve equal size groups These questions either ask for the total and are thus solved by multiplying or they ask for the size of the group or for the quantity of the groups one can write a missing number multiplication sentence such as 3 \_\_\_ 18 or use division The book also includes word problems with fractions with large numbers with money geometry word problems and challenges in the form of puzzle corners You can download sample pages from this link [https://www.mathmammoth.com/word\\_problems\\_Foundational\\_Word\\_Problems\\_samples.pdf](https://www.mathmammoth.com/word_problems_Foundational_Word_Problems_samples.pdf)

**Math Mammoth Multiplication 1** Maria Miller, 2016-11-18 Math Mammoth Multiplication 1 is a fairly self explanatory worktext to learn the concept of multiplication and the multiplication tables It has two parts The first part concentrates on the concept of multiplication the order of operations and word problems The second part is all about memorizing the times tables I have created a systematic approach to memorizing the times tables In this method one table is studied at a time to mastery The individual tables are NOT studied in the order of 2 3 4 etc but instead the easy tables of 2 5 10 and 11 are studied first The study order also includes studying the table of 4 right after the table of 2 and studying the table of 6 right after the table of 3 because the skip counting patterns of those tables share some similarities The lessons emphasize the fact that one multiplication fact is always in two different tables This way when the student gets to the hardest tables the tables of 7 8 and 12 there are only a few totally new facts to learn We always start the study of each table by memorizing the skip counting pattern 7 14 21 28 etc first Then we work on memorizing which fact is associated with which answer This way your child not only knows what is 8 7 but also knows all of it backwards that 56 is in the tables of 8 and 7 That knowledge will be an enormous help later when the student learns division factorizing and finding LCM s or GCF s The book also includes a 12x12 grid at the end of almost every lesson in part 2 The boxes for those answers that have not been studied yet are shaded and are not to be filled in Little by little the shaded areas become fewer and fewer and the progress is very visible to the student I encourage you also to use games for motivation and for practice I have included a list of online multiplication games for that purpose Of course board and card games work well also However games are not enough in themselves The memorization also requires a mental effort from the student sitting down with the skip counting list then with the facts reading them and then trying to remember them The basic age old technique of covering the list and trying to remember it is still very effective
