Khinchin, 1949-06-01 [Symplectic Geometry and Quantum Mechanics](#) Maurice A. de Gosson, 2006-08-06 This book offers a complete discussion of techniques and topics intervening in the mathematical treatment of quantum and semi classical mechanics It starts with a very readable introduction to symplectic geometry Many topics are also of genuine interest for pure mathematicians working in geometry and topology [Local Limit Theorems for Inhomogeneous Markov Chains](#) Dmitry

Dolgopyat, Omri M. Sarig, 2023-07-31 This book extends the local central limit theorem to Markov chains whose state spaces and transition probabilities are allowed to change in time Such chains are used to model Markovian systems depending on external time dependent parameters The book develops a new general theory of local limit theorems for additive functionals of Markov chains in the regimes of local moderate and large deviations and provides nearly optimal conditions for the classical expansions as well as asymptotic corrections when these conditions fail Applications include local limit theorems for independent but not identically distributed random variables Markov chains in random environments and time dependent perturbations of homogeneous Markov chains The inclusion of appendices with background material numerous examples and an account of the historical background of the subject make this self contained book accessible to graduate students It will also be useful for researchers in probability and ergodic theory who are interested in asymptotic behaviors Markov chains in random environments random dynamical systems and non stationary systems **Information Complexity and Control in**

Computational Cellular Biology David Holcman, 2017-10-04 This book focuses on the modeling and mathematical analysis of stochastic dynamical systems along with their simulations The collected chapters will review fundamental and current topics and approaches to dynamical systems in cellular biology This text aims to develop improved mathematical and computational methods with which to study biological processes At the scale of a single cell stochasticity becomes important due to low copy numbers of biological molecules such as mRNA and proteins that take part in biochemical reactions driving cellular processes When trying to describe such biological processes the traditional deterministic models are often inadequate precisely because of these low copy numbers This book presents stochastic models which are necessary to account for small particle numbers and extrinsic noise sources The complexity of these models depend upon whether the biochemical reactions

are diffusion limited or reaction limited In the former case one needs to adopt the framework of stochastic reaction diffusion models while in the latter one can describe the processes by adopting the framework of Markov jump processes and stochastic differential equations Stochastic Processes Multiscale Modeling and Numerical Methods for Computational Cellular Biology will appeal to graduate students and researchers in the fields of applied mathematics biophysics and cellular biology

Maximum-Entropy and Bayesian Methods in Science and Engineering G. Erickson, C.R. Smith, 2013-03-13 This volume has its origin in the Fifth Sixth and Seventh Workshops on Maximum Entropy and Bayesian Methods in Applied Statistics held at the University of Wyoming August 5 8 1985 and at Seattle University August 5 8 1986 and August 4 7 1987 It was anticipated that the proceedings of these workshops would be combined so most of the papers were not collected until after the seventh workshop Because most of the papers in this volume are in the nature of advancing theory or solving specific problems as opposed to status reports it is believed that the contents of this volume will be of lasting interest to the Bayesian community The workshop was organized to bring together researchers from different fields to critically examine maximum entropy and Bayesian methods in science and engineering as well as other disciplines Some of the papers were chosen specifically to kindle interest in new areas that may offer new tools or insight to the reader or to stimulate work on pressing problems that appear to be ideally suited to the maximum entropy or Bayesian method These workshops and their proceedings could not have been brought to their final form without the support or help of a number of people
