Miller M.D., Miklos Simon MD, 2015-02-03 Two leading oncologists along with experts spanning several medical disciplines shed light on the global pandemic of cancer particularly the difference in diagnosis treatment and care between global communities Despite advancing globalization and amazing breakthroughs in modern medicine developing countries continue

to struggle with the prevention and treatment of the most common killer in the world today cancer. Logistical barriers, scarceness of resources and economic hardships in these regions make the screening, detection and care of this disease difficult at best. This book is the only one of its kind to review the pandemic of cancer from a global and epidemiological perspective. The work is presented in three sections focusing on key issues in cancer management, treatment of specific types of the disease and the difference in medical care between low, medium and high resource countries. Chapters address the history, incidence and treatment across nations, prevailing cultural attitudes which may delay or prevent treatment in many parts of the world and the geopolitics of cancer care and funding. Patients and caregivers from all around the globe explain the daily challenges of living with the disease in their nation. Dietary Intake and Type 2 Diabetes Omorogieva

Ojo, 2019-12-05. The prevalence of diabetes is on the increase in the UK and worldwide, partly due to changes in lifestyle which predispose individuals to overweight and obesity. It is estimated that about 90% of the currently diagnosed adults have type 2 diabetes and based on the World Health Organisation (WHO) report about 422 million adults were living with diabetes in 2014 compared with 108 million in 1980; this condition caused about 1.5 million deaths in 2012. In the United States of America, it is estimated that about 30.3 million adults are living with diabetes, with a further 1.5 million new diabetes cases diagnosed every year, representing an increasing prevalence of this condition. Diabetes represents a major public health challenge despite advances in technology and the pharmaceutical industry. These problems may be in the form of acute or long-term complications. Therefore, in order to attenuate the problems of diabetes, management strategies usually include lifestyle changes such as increased physical activity and dietary interventions. Studies which evaluate the role of nutrition in the management of type 2 diabetes often involve human and animal models as these approaches enable us to have a broader and more in-depth understanding of the condition. In some cases, diabetes may co-exist with other conditions such as stroke and these may present unique challenges with regard to nutritional interventions. This Special Issue aims to evaluate the risk factors associated with type 2 diabetes and the role of the diet in the management of people with this condition. This evidence is drawn from both human and animal studies. Southern Medical Journal, 1922. *The Journal of Industrial Hygiene*
