Generation of Viper Jack Hall,2010-08-04 The Holy Bible is the figurative allegory of Gods creation It was only fitting that in a dual heaven and earth unity of object and subject that both the literal translation of the word as well as the figurative be combined in the only absolute truth known to man This inspired revelation was nullified by the 15th century age of science which will bisect creation closing the subjective curtain to heaven and placing Big Bang upon Gods vacated throne This will turn creation inside out unleashing the great Satan viper to adulterate freedom in its constraint of earths fiery genesis of chaos America will become an immoral cesspool script to a deceptive liberal and progressive mindset of a false utopia unattainable on imperfect earth This book cries out to the Tea Party freedom loving patriot to rid the scourge now overtaking the land **The Elements of Algebra ... Towards a General Theory of Classifications Daniel Parrochia,Pierre Neuville,2013-05-14 This book is an essay on the epistemology of classifications Its main purpose is not to provide an exposition of an actual mathematical theory of classifications that is a general theory which would be available to any kind of them hierarchical or non hierarchical ordinary or fuzzy overlapping or non overlapping finite or infinite and so on establishing a basis for all possible divisions of the real world For the moment such a theory remains nothing but a dream Instead the authors essentially put forward a number of key questions Their aim is rather to reveal the state of art of this dynamic field and the philosophy one may eventually adopt to go further To this end they present some advances made in the course of the last century discuss a few tricky problems that remain to be solved and show the avenues open to those who no longer wish to stay on the wrong track Researchers and professionals interested in the epistemology and philosophy of science library science logic and set theory order theory or cluster analysis will find this book a comprehensive original and progressive introduction to the main questions in this field

using the material that is accessible to people with little preliminary knowledge The first chapter of the book talks about the geometry and topology of surfaces Among other topics the authors discuss the Poincar Hopf theorem about critical points of vector fields on surfaces and the Gauss Bonnet theorem about the relation between the curvature and topology Euler characteristics The second chapter addresses various aspects of the concept of dimension including the Peano curve and the Poincar approach to dimension It also discusses the structure of three dimensional manifolds proving in particular that the three dimensional sphere is the union of two doughnuts
