This system is designed to capture the essential (200–2000 Å) covered range, the one intended to capture the really big bang optical emission lines. The multi-channel diffracting the light into a few channels in long gratings. They will channel the coverage on Å scale but it is believed that the full covered 10 Å can be further compressed by a dichroic mirror. When the system is ready to be developed, the authors will publish a preliminary study on the technique for the full wavelength coverage. To facilitate the efforts of the other community using the multi-channel coverage in a broad Å scale, we will release the system.

Abstract: The purpose of this study was to determine the effect of a 12-week, 100% body weight (BW) resistance training program on the muscle strength and body composition of sedentary, middle-aged women. The subjects were randomly assigned to either a resistance training (RT) or control (CON) group. The RT group performed a 12-week, 100% BW resistance training program, while the CON group performed no exercise. The RT group showed significant increases in muscle strength and body composition, while the CON group showed no significant changes. The results of this study suggest that a 12-week, 100% BW resistance training program is effective in improving muscle strength and body composition in sedentary, middle-aged women.
