McEvoy, 2016-12-15 *Financial Management in the Sport Industry* provides readers with an understanding of sport finance and the importance of sound financial management in the sport industry. It begins by covering finance basics and the tools and techniques of financial quantification using current industry examples to apply the principles of financial management to sport. It then goes beyond the basics to show how financial management works specifically in sport: how decisions are made to ensure wealth maximization. Discussions include debt and equity financing, capital budgeting, facility financing, economic impact, risk, and return, time value of money, and more. The final section focuses on sport finance in three sectors of the industry: public sector sports, collegiate athletics, and professional sport, providing in-depth analysis of financial management in each sector. Sidebars, case studies, concept checks, and practice problems throughout provide practical applications of the material and enable thorough study and practice. The business of sport has changed dynamically since the publication of the first edition, and this second edition reflects the impact of these changes on financial management in the sport industry. New to this edition are changes to reflect the global nature of sport, with for example discussions of income tax rates in the Premier League, expanded material on the use of spreadsheets for financial calculations, a primer on accounting principles to help students interpret financial statements, a valuation case study assignment that takes students step by step through a valuation, a new stadium feasibility analysis using the efforts of the Oakland Raiders to obtain a new stadium, a new economic impact example focusing on the NBA All Star game, and much more.

**The Political Economy of Food and Finance** Ted P. Schmidt, 2015-12-14 The financialization, globalization, and industrialization of our food systems make it increasingly difficult to access quality fresh food. In fact, the industrialized global food system is creating products that are less food-like, engendering growing questions about the health and safety of our food supply. In addition, the bioengineering of food commodities is another factor influencing the growth of industrial farming for an increasingly homogenized, globalized market. This book describes the financialization process in commodity futures markets, which transformed commodities into an asset class. Incorporated into the portfolio decisions of investors, commodity prices now behave like all asset prices, becoming more volatile and subject to periodic bubbles. As commodity prices were driven higher in the 2000s, farmland became more valuable, setting off a global land grab by investors, nations, and corporations. More recently, under the financialization food regime, slow growth and low returns encouraged merger activity driven by private equity firms with food industry corporations as prime targets, leading to increased industry concentration. With government policy focused on supporting corporate interests, there has been a global reaction to the current food system. The food sovereignty movement is taking on the interests behind the global land grab, and the regional food movement in cities across the U.S. is hitting corporations at the bottom line. Food corporations are listening. Is the food movement winning? This book is of interest to those who study political economy, financialization, and agriculture and related studies, as well as food systems.
