COMPANY VALUATION UNDER IFRS - 3RD EDITION Nick Antill, Kenneth Lee, Deborah Taylor, 2020-02-11 Revised and updated. The influence of International Financial Reporting Standards (IFRS) on accounting across the world is stronger than ever. Most importantly, this stems from the mandatory adoption of IFRSs in many parts of the world, including Europe, Canada, Australia, Brazil, and with some relatively small exceptions, China. Additionally, foreign registrants in the US are also permitted to use IFRS by the SEC. The impact of IFRSs also extends to accounting developments as the IASB and the FASB work closely together to formulate new standards such as those recently issued on leasing and revenue recognition. It is clear that investors, analysts, and valuers need to understand financial statements produced under IFRS to feed in to their valuations and broader investment decisions. Written by practitioners for practitioners, the book addresses valuation from the viewpoint of the analyst, the investor, and the corporate acquirer. It starts with valuation theory: what is to be discounted and at what discount rate. It explains the connection between standard methodologies based on free cash flow and on return on capital. And it emphasizes that whichever method is used, accurate interpretation of accounting information is critical to the production of sensible valuations. The authors argue that forecasts of cash flows imply views on profits and balance sheets, and that non-cash items contain useful information about future cash flows, so profits matter. The book addresses the implications for analysis, modelling, and valuation of key aspects of IFRS, all updated for recent developments including Pensions, Stock options, Derivatives, Provisions, Leases, Revenue recognition, Foreign currency. The text also sets out the key differences between IFRS and US GAAP treatments of these issues, in addition to their implications for analysis. A detailed case study is used to provide a step-by-step valuation of an industrial company using both free cash flow and economic profit methodologies. The authors then address a range of common valuation problems, including cyclical or immature companies, as well as the specialist accounting and modelling knowledge required for regulated utilities, resource extraction companies, banks, insurance companies, real estate companies, and technology companies. Accounting for mergers and disposals is first explained and then illustrated with a detailed

Accounting *The Marketing / Accounting Interface* Robin Roslender, Richard M.S. Wilson, 2013-09-13 When marketing managers and financial managers join forces within any business the result can often be poor communication on financial criteria and goals The risk of this situation occurring is inevitably present when those with different professional backgrounds and roles are working in accordance with their own norms In his seminal 1956 paper on general systems theory the economist Kenneth Boulding referred to the phenomenon of specialised ears and generalised deafness which can be seen to exist when marketing managers are financially illiterate or when financial managers lack the necessary insights to design implement and operate accounting systems which are useful to marketing managers in carrying out their roles It is increasingly difficult to attach credence to the idea of marketing managers who lack financial skills or financial managers who fail to relate to the context in which marketing managers operate Understanding the marketing accounting interface is therefore important in generating emergent properties from the interaction of marketers and accountants whereby the whole is greater than the sum of the parts The chapters in this volume seek to address this challenge This book was originally published as a special issue of the Journal of Marketing Management

New Strategies for Financial Services Firms Dennis Kundisch, 2012-12-06 The theme of this book New strategies for financial services providers is an equally relevant and important topic in science and practice In the post information age economy the German financial services market and many big financial services providers are in a deep crisis Increasing competition due to deregulation and improved transparency through new means of communication on the one hand and empowered customers demanding individualized solutions for their financial problems e g because of new working circumstances increase the pressure on the market participants to alter their strategies according to these new challenges Many firms have reacted defensively either by merging in the hopes of realizing scale effects a high risk venture considering the last few years or by adapting me too strategies also known as lemming banking that do not provide for a sustainable competitive advantage Based on a profound analysis of developing mega trends in the years ahead especially in information and IT intense market Dr Kundisch develops a new anti cyclical strategy that aims at using IT as an enabler to

strengthen customer relationships and focus on individualized solutions wherever it seems economically sound to do so. However, he does not stop after the development of the strategy but provides two important concepts that may help turn this vision and strategy into reality. Thus, he favorably and refreshingly differentiates against many contributions that stop at the fairly abstract strategic level.

Digital Innovation in Financial Services Phoebus L. Athanassiou, 2016-04-24. Consumer behaviour is rapidly trending towards the use of digital devices as instruments through which to transact day to day business. This original and timely book shows how this trend creates new opportunities not only for retail consumers but also for financial service providers, regulators and central banks. The author offers a comprehensive overview of these opportunities and their countervailing legal and regulatory challenges. The author describes and analyses in unprecedented detail the application of digital financial innovation, FinTech and some of its core manifestations including virtual currencies, Blockchain and distributed ledger technologies to the delivery of financial services in areas such as payments, securities clearing and settlement, central banking, real time access to financial information, instant completion of core financial transactions, data validation and reconciliation processes and digital contracting, smart contracts. Also clarified are the legal and other barriers to be overcome including cybersecurity and risks to privacy before any widespread adoption of digital innovation in the highly regulated financial sector context can occur. As an informed assessment of the legal merits and risks of technological innovation for financial service providers and central banks and as a contribution to establishing a conceptual framework within which to analyse and better understand the applications of digital innovation to the financial sector, this practical work is bound to be welcomed by legal practitioners and legal scholars alike with an interest in financial services. Policymakers and regulators will also appreciate its guidance on how to temper the less benevolent aspects of FinTech with targeted risk focused regulation so as to promote innovation and preserve the potential benefits for financial markets and their participants alike.
