KEY – the answers are just highlights. For more details, examples, more in depth work, see student notes, worksheets, lab activities, etc.

SUGGESTED Study Strategies (not required, but should be helpful)

- Flash Cards (scientists, facts, bird beaks, vocabulary, etc.)
- Create your own study guide or test (quiz yourself)
- Group Studying (maybe text a friend some questions)
- Memorization, Mnemonic Devices, Acronyms
- Reread, rewrite your notes, organize notes, and/or highlight key concepts
- Revisit daily opening activities, quizzes, worksheets, labs, etc.
- Visit teacher webpage to review any notes or handouts

VOCABULARY: Define and provide examples if able

Adaptation – The right tool for the job. A trait with a current functional role in the life history of an organism that is maintained and evolved by means of natural selection. Examples: bird wings, camouflage, hibernation, herding, poison, teeth, milking, etc.

Contrivance – A tool, but not quite right for the job. Objects used, or modified, to do something clearly very different from what they were normally used for, and typically not highly efficient. Also known as pre-adaptations. Example: Spinal column, larynx, land animals having flippers.

Vestigial – A useless tool. Organs that serve no useful function in an organism. For example: appendix, tailbone, miniature legs/arm, wisdom teeth, blind fish having "eyes", etc.

Homologous Structures – A similar structure between two different species that share a common ancestor. For example: All mammals have similar arm structures, a human and a whale have the same basic bones in their arms/fins.

Analogous Structures – A similar structure between two different species that do not share a common ancestor. For example: bird wing and a bee's wing.

Evolution – an organism slowly changing over time to better adapt to its environment.

Embryo – The early stage of an organism's development. Occurs shortly after fertilization of the female egg.

Natural Selection – Nature or the environment influencing which traits of an organism will become more or less common in order for that organism to better survive in the environment.

Artificial Selection – Unnatural or human influences that choose which traits an organism will have. For example: dog breeding where humans choose which dogs to breed together.

Fossil - A mineralized cast or impression of organisms or their body parts.

IMPORTANT PEOPLE: Summarize their contributions to evolution and natural selection.

Hosken, 2014-09-03 Sexual selection is recognized as being responsible for some of the most extravagant morphologies and behaviors in the natural world as well as a driver of some of the most rapid evolution While Charles Darwin s theory is now a fundamental component of modern evolutionary biology the impact of genotype by environment interactions on sexual selection has thus far received little attention This book represents the first comprehensive analysis of the role genotype by environment interactions play in sexual selection and the potential implications that they have for the evolutionary process The Editors have identified 13 topics that currently define the field and shed light on the impacts of these interactions on sexual selection This includes key topics such as resolving the lek paradox and how genotype by environmental interactions can compromise

the honesty of sexual signals The volume also outlines key questions that remain unanswered and provides a comprehensive guide to analyzing genotype by environment interactions The mix of theory empirical studies and practical instructions from world leading experts make this book a particularly potent and definitive guide on the topic It will be of interest to evolutionary biologists spanning from genomicists to behaviorists This is a very timely book covering a topic that should change the way we think about sexual selection The contributors are all leaders and the topics should provide guidance to many PhD projects in the years to come GEI is increasingly shown to be important and it seems likely that it is critical in species where sexual selection is operating This book is likely to help revitalize the study of sexual selection Professor Allen Moore The University of Georgia GEIs fascinate evolutionary biologists but the unique consequences for sexually selected traits have been neglected until now This multi authored book comprehensively explains key theoretical concepts handles practical how to issues and uses classic case studies to illustrate the value of studying GEIs It is a must read for everyone interested in sexual selection Professor Michael Jennions The Australian National University
