Introduction

The purpose of this pack is to introduce the reader to the main features of the research process. The type of information which informs decisions about how to undertake a research project is described and supported by examples from primary care and other health services research. The pack is intended for health care professionals with little or no previous research knowledge.

If a project is worth doing then it is probably worth convincing an interested organisation to fund it. There are no guaranteed ways of securing funding but there are steps you can take to maximise your chances of success. Applying for research funding might sound like the starting point of the research process but applicants need to demonstrate a clear idea of the entire process of a research project, right up until what will happen at the end of the process (for example modes of dissemination and practical implementation of results), in order to convince a funding body that their money will be spent wisely.

The pack is split into two sections. The first section 'Getting Started', takes the reader through a whistle stop tour of the research process and provides advice on how to get beyond a vague research idea to something that (with expert help, hard work and lots of enthusiasm) has the potential to generate new insights into health care issues and concerns. The second section, 'Getting Funded', looks at the context of research funding in the UK and encourages the reader to put their own research ideas to the acid test of a funding application.

As many of the terms used may be either new or used in a context unfamiliar to readers, a glossary of terms is provided at the back of the pack. We have tried to make the exercises of practical use to the reader. Some of the exercises test the reader's understanding of the concepts contained within the pack, while others give the reader the opportunity to work with their research ideas about their own areas of interest.

The other resource packs in this series provide more detail on specific aspects of the research process. The reader is pointed to specific resource packs at various points within this pack. The full list of packs produced by The NIHR RDS EM / YH can be found at:

Introduction to Research and Medical Literature for Health Professionals J. Dennis

Blessing, J. Glenn Forister, 2013 Rev ed of Physician assistant's guide to research and medical literature edited by J Dennis Blessing 2nd ed Philadelphia F A Davis c2006

An Introduction to Game Studies Frans Mäyrä, 2008-02-18 An Introduction to Game Studies is the first introductory textbook for students of game studies. It provides a conceptual overview of the cultural, social, and economic significance of computer and video games and traces the history of game culture and the emergence of game studies as a field of research. Key concepts and theories are illustrated with discussion of games taken from different historical phases of game culture. Progressing from the simple yet engaging gameplay of Pong and text-based adventure games to the complex virtual worlds of contemporary online games, the book guides students towards analytical appreciation and critical engagement with gaming and game studies. Students will learn to understand and analyse different aspects of phenomena we recognise as game and play. Identify the key developments in digital game design through discussion of action in games of the 1970s, fiction and adventure in games of the 1980s, three dimensionality in games of the 1990s, and social aspects of gameplay in contemporary online games. Understand games as dynamic systems of meaning making. Interpret the context of games as culture and subculture. Analyse the relationship between technology and interactivity and between game and reality. Situate games within the context of digital culture and the information society. With further reading suggestions, images, exercises, online resources, and a whole chapter devoted to preparing students to do their own game studies project, An Introduction to Game Studies is the complete toolkit for all students pursuing the study of games. The companion website at www.sagepub.co.uk/mayra contains slides and assignments that are suitable for self study as well as for classroom use. Students will also benefit from online resources at www.gamestudiesbook.net which will be regularly blogged and updated by the author. Professor Frans Mäyrä is a Professor of Games Studies and Digital Culture at the Hypermedia Laboratory in the University of Tampere, Finland.

Introduction to Scientific Research Projects Graham Basten, 2011

The Analytical Writer Adrienne Robins, 1995-09 In The Analytical Writing, Adrienne Robins explains college writing as a process of discovery as a series of strategies that any college student can learn to apply. All strategies explained in this text are based on sound theories of teaching writing and on the patterns of successful writers. Writing and thinking should not be separated and presenting only the steps without the accompanying explanation of how they influence thinking would be of little more help than having no method at all. By using this text, the students will see as they plan, draft, and revise how their writing helps clarify their thoughts. This clearly written and engaging textbook is illustrated by real examples of student writing and appropriate cartoons. The second edition was revised and updated based on the large scale evaluation of the first edition completed by professors and students. The new edition reflects four essential values: recognizing the diversity of writing processes, the necessity of peer and teacher interaction with the writer on drafts, the integration of writing and reading, and the appropriate uses of technology. Specific features of this second edition include new writing samples, electronic citation formats, updated library use chapter with technological guidance, concise paragraph chapter, revised

introduction and conclusion chapter rhetorical as well as grammatical explanations for punctuation usage new cartoons exercises drawn from students papers a condensed chapter on research papers and an expanded and clearer chapter on special assignments and other writing tasks A Collegiate Press book

Writing a Research Paper in Political Science Lisa A. Baglione, 2018-12-31 Even students capable of writing excellent essays still find their first major political science research paper an intimidating experience Crafting the right research question finding good sources properly summarizing them operationalizing concepts and designing good tests for their hypotheses presenting and analyzing quantitative as well as qualitative data are all tough going without a great deal of guidance and encouragement Writing a Research Paper in Political Science breaks down the research paper into its constituent parts and shows students what they need to do at each stage to successfully complete each component until the paper is finished Practical summaries recipes for success worksheets exercises and a series of handy checklists make this a must have supplement for any writing intensive political science course New to the Fourth Edition A non causal research paper woven throughout the text offers explicit advice to guide students through the research and writing process Updated and more detailed discussions of plagiarism paraphrases drop ins and transcripts help to prevent students from misusing sources in a constantly changing digital age A more detailed discussion of fake news and disinformation shows students how to evaluate and choose high quality sources as well as how to protect oneself from being fooled by bad sources Additional guidance for writing abstracts and creating presentations helps students to understand the logic behind abstracts and prepares students for presentations in the classroom at a conference and beyond A greater emphasis on the value of qualitative research provides students with additional instruction on how to do it
