amazingly effective for their research Low Google Scholar indexing ratios for library institutional repositories is widespread because it ignores common library metadata and high value content through libraries is consequently invisible to researchers Authors Arlitsch and O'Brien share their expertise in digital libraries and corporate marketing to offer practical steps for search engine optimization such as Recommended dashboards to increase participation by sharing data Avoiding the four most common crawler errors that lead to low rankings How to effectively utilize the Google Keyword Tool How to use domain settings to generate unit specific reports for special collections institutional repositories and university presses Arlitsch spent a year researching search engine optimization and consulting with OCLC on web scale library technologies O'Brien has more than 15 years experience in a corporate setting working in aligning business processes and metrics with sales and marketing strategy

Understanding Search Engines Dirk Lewandowski, 2023-03-07 This book provides a broad introduction to search engines by integrating five different perspectives on Web search and search engines that are usually dealt with separately the technical perspective the user perspective the internet based research perspective the economic perspective and the societal perspective After a general introduction to the topic two foundational chapters present how search tools can cover the Web's content and how search engines achieve this by crawling and processing the found documents The next chapter on user behavior covers how people phrase their search queries and interact with search engines This knowledge builds the foundation for describing how results are ranked and presented The following three chapters then deal with the economic side of search engines i.e. Google and the search engine market search engine optimization SEO and the intermingling of organic and sponsored search results Next the chapter on search skills presents techniques for improving searches through advanced search interfaces and commands Following that the Deep Web and how its content can be accessed is explained The two subsequent chapters cover ways to improve the quality of search results while the next chapter describes how to access the Deep Web Last but not least the following chapter deals with the societal role of search engines before the final chapter concludes the book with an outlook on the future of Web search With this book students and professionals in disciplines like computer science online marketing or library and information science will learn how search engines work what their main shortcomings are at present and what prospects there are for their further development The different views presented will help them to understand not only the basic technologies but also the implications the current implementations have concerning economic exploitation and societal impact

Global Technology and Legal Theory Guilherme Cintra Guimarães, 2019-06-05 The rise and spread of the Internet has accelerated the global flows of money technology and information that are increasingly perceived as a challenge to the traditional regulatory powers of nation states and the effectiveness of their constitutions The acceleration of these flows poses new legal and political problems to their regulation and control as shown by recent conflicts between Google and the European Union EU This book investigates the transnational constitutional dimension of recent conflicts between Google and the EU in the areas of competition taxation

and human rights More than a simple case study it explores how the new conflicts originating from the worldwide expansion of the Internet economy are being dealt with by the institutional mechanisms available at the European level The analysis of these conflicts exposes the tensions and contradictions between on the one hand legal and political systems that are limited by territory and on the other hand the inherently global functioning of the Internet The EU's promising initiatives to extend the protection of privacy in cyberspace set the stage for a broader dialogue on constitutional problems related to the enforcement of fundamental rights and the legitimate exercise of power that are common to different legal orders of world society Nevertheless the different ways of dealing with the competition and fiscal aspects of the conflicts with Google also indicate the same limits that are generally attributed to the very project of European integration showing that the constitutionalization of the economy tends to outpace the constitutionalization of politics Providing a detailed account of the unfolding of these conflicts and their wider consequences to the future of the Internet this book will appeal to scholars working in EU law international law and constitutional law as well as those in the fields of political science and sociology
