
OPERATIONAL MANUAL FOR 85XX

TECHNICAL DETAILS

This is a versatile microcontroller based Scanner with a very high performance to price ratio. The features offered in this product are better than any other Scanner available in similar price range.

The instrument is made in 96x192x210 mm size with standard cut out of 92x188 mm. Front is sealed membrane type to withstand dusty environment. On back plate PCB soldered 35 deg. angled terminals and flat terminals of very good quality are used.

The programming, calibration and operation of the instrument is by nine simple keys with two independent displays for channel and data for that channel. Channel display is of two digit to differentiate it from Data display of four digit each of 0.56" display. Status of Run/ Program/Verify mode, Fault, Auto/Manual mode and status of each channel for programmed set point type and limits are displayed by 3 mm red LEDs. The operation of the instrument is menu driven with user understandable prompts. Provision for PASS WORD is kept for unauthorised access.

The product is made to accept all 7 standard thermocouple, PT100 RTD, Linear voltage and current inputs. The type of input can be changed in field itself. The calibration of the unit is done without trim pots. The unit can be calibrated in installed condition itself by front panel keys at any given point i.e. user need not feed a fixed signal. RTD inputs are linearized for 0.1 deg. as well as 1 deg. resolution.

No. of Groups as well as no. of channels within the group are programmable.

Set point type (LL, hL or hH), abnormal status for alarm limit 1 and alarm limit 2 (Alarm or Trip) as well as Relay action type for alarm limit 1 and alarm limit 2 (ON or OFF) are programmable.

Latching for LED Status of alarm limit 1 and alarm limit 2 is programmable.

For each group two relays are given. (Relays with two NO/NC contacts are optional).

Scan time is programmable up to 99 seconds.

Provision for zero and span setting is made to restrict range of usage and programming. This restricts accidental wrong setting of set point beyond the range of interest. Outside this range the unit will indicate data as 'OVER' for some abnormal condition. This zero and span setting is used for linear inputs for setting the range between -1999 to 9999 counts.

Serial Communication with RS 232 / RS 485 is also provided for using the scanner as backend for Supervisory Control or for P.C. connectivity. Standard protocol for communication used is "MODBUS-RTU".
