Rhodes, 1929 *Key to Olney's Elements of Geometry and Plane and Spherical Trigonometry, with an Introduction on Method of Teaching* Wooster Woodruff Beman, 1880 **Geometry Illuminated** Matthew Harvey, 2015-09-25 Geometry Illuminated is an introduction to geometry in the plane both Euclidean and hyperbolic It is designed to be used in an undergraduate course on geometry and as such its target audience is undergraduate math majors However much of it should be readable by anyone who is comfortable with the language of mathematical proof Throughout the goal is to develop the material patiently One of the more appealing aspects of geometry is that it is a very visual subject This book hopes to take full advantage of that with an extensive use of illustrations as guides Geometry Illuminated is divided into four principal parts Part 1 develops neutral geometry in the style of Hilbert including a discussion of the construction of measure in that system ultimately building up to the Saccheri Legendre Theorem Part 2 provides a glimpse of classical Euclidean geometry with an emphasis on concurrence results such as the nine point circle Part 3 studies transformations of the Euclidean plane beginning with isometries and ending with inversion with applications and a discussion of area in between Part 4 is dedicated to the development of the Poincaré disk model and the study of geometry within that model While this material is traditional Geometry Illuminated does bring together topics that are generally not found in a book at this level Most notably it explicitly computes parametric equations for the pseudosphere and its geodesics It focuses less on the nature of axiomatic systems for geometry but emphasizes rather the logical development of geometry within such a system It also includes sections dealing with trilinear and barycentric coordinates theorems that can be proved using inversion and Euclidean and hyperbolic tilings
