In the making: Digital fabrication and disability Ursula Kate Hurley, 2020-07-14 Digital fabrication combines virtual and material worlds transforming thoughts into things and things into data It fosters complex and varied communities while enabling the pursuit of unique individual outputs Current literature on digital fabrication concentrates on its technical and economic potential with little attention yet being paid to the fundamental questions of how the technology might affect our understanding of identity embodiment or creative processes Using case studies and experiences gained from ground breaking fieldwork In the Making explores these processes and their products from both cultural and aesthetic perspectives with emphasis on its human interactions not on technology Embracing the absence of established methodologies in their emerging area of investigation this volume offers a series of wide ranging and original interdisciplinary framings which arise from the materials themselves That very act of imagining of selecting and committing to an envisaged but not yet physically present product offers insights into needs and desires What is the story of that design How did it come to be The basic principles of digital fabrication the transformation from concept to physical entity offer intriguing possibilities for aesthetic and cultural readings particularly from the perspectives of disability Online open access maker communities mean that anyone with an internet connection and a desktop 3D printer is able to download and print a wide variety of replicable and customisable objects What might this mean for disabled people As digital fabrication technologies enter mainstream society In the making poses urgently applicable questions about presence existence and authenticity and begins to suggest how we might explore them
