Developing Software for Symbian OS Steve Babin, 2008-02-28 Many problems encountered by engineers developing code for specialized Symbian subsystems boil down to a lack of understanding of the core Symbian programming concepts. Developing Software for Symbian OS remedies this problem as it provides a comprehensive coverage of all the key concepts. Numerous examples and descriptions are also included which focus on the concepts the author has seen developers struggle with the most. The book covers development ranging from low level system programming to end user GUI applications. It also covers the development and packaging tools as well as providing some detailed reference and examples for key APIs. The new edition includes a completely new chapter on platform security. The overall goal of the book is to provide introductory coverage of Symbian OS v9 and help developers with little or no knowledge of Symbian OS to develop as quickly as possible. There are few people with long Symbian development experience compared to demand due to the rapid growth of Symbian in recent years and developing software for new generation wireless devices requires knowledge and experience of OS concepts. This book will use many comparisons between Symbian OS and other OSes to help in that transition. Get yourself ahead with the perfect introduction to developing software for Symbian OS.

New Trends in Internet Market Jose Manuel Garcia Sanchez, 2007-06-04 Inhaltsangabe Abstract Internet Broadband access Mobile telephony Fixed telephony TV Google Yahoo Social networks Mobile network operators Telecommunication operators Media conglomerates Citizen media All these terms have always been traditionally considered independent but nowadays the interrelations among all of them happen more often and are becoming deeper. A new global scenario is being defined in which communications, entertainment and information are converging, being provided by global conglomerates in our PCs, TVs and mobile devices. Nowadays technology advances will soon enable to provide users with the best internet experience on the go. Services, hosts, access providers, vendors, media owners and online players now realize that the barriers that traditionally have separated their markets dilute, bringing them all in a common global market. Internet business models have now to converge with traditional structures and merges and acquisitions happen to reach competitive positions in foreign markets. The paradigm of internet will influence and change the most popular services as they are currently known. Fixed communication providers already suffer a loss of voice revenues in favor of the cheapest online

communication Mobile operators are facing now the same situations and find themselves on a delicate strategic situation with VoIP nearing a competitive QoS voice along doesn't seem to be for a long time enough as unique revenue source Even watching TV will be soon an enriched personalized experience through the new IP end2end platforms Will the online players be the ones successfully accomplishing a vertical expansion of their business How will the mobile operators react Which will be the paper of the network access providers What about the media and content How will all that affect the customers In this document will be described the nowadays situation on the different markets involved in the converging scenario and how the respective players situate themselves strategically An initial global point of view will be followed by the definition of strategies and trends of each of them independently and the determination of the merging points and relations among them The effort will be focus firstly on offering recommendations and comparisons concerning specific environments Step by step the basis of the competition environment in the converging market will be defined offering a strategic map of the
