Contaminant Hydrogeology C. W. Fetter, Thomas Boving, David Kreamer, 2017-10-24 Tremendous progress has been made in the field of remediation technologies since the second edition of Contaminant Hydrogeology was published two decades ago and its content is more important than ever Recognizing the extensive advancement and research taking place around the world the authors have embraced and worked from a larger global perspective Boving and Kreamer

incorporate environmental innovation in studying and treating groundwater soil contamination and the transport of those contaminants while building on Fetter's original foundational work. Thoroughly updated, expanded and reorganized, the new edition presents a wealth of new material including new discussions of emerging and potential contaminant sources and their characteristics like deep well injection, fracking fluids and in situ leach mining. New sections cover BET and Polanyi adsorption, potential theory, vapor transport theory, the introduction of the Capillary and Bond Numbers, the partitioning interwell tracer testing technique for investigating NAPL sites, aerial photographic interpretation, geophysics, immunological surveys, high resolution vertical sampling, flexible liner systems, groundwater tracers and much more. Contaminant Hydrogeology is intended as a textbook in upper level courses in mass transport and contaminant hydrogeology and remains a valuable resource for professionals in both the public and private sectors. *Water Quality Assessment*, 1985

Handbook ,1994 Item no 0431 K **Functional Assessment of Wetlands** E. Maltby,2009-04-27 Wetlands perform functions that deliver benefits to society often referred to as ecosystem services These ecosystem services include water supply flood regulation water purification climate regulation biodiversity agriculture e g grazing land and amenity A functional approach to wetland assessment enables a holistic view to be taken of the wide range of services wetlands can provide The functional assessment procedures FAPs in this volume translate best available scientific knowledge into reasonable predictions of how component parts of wetlands function in different landscape contexts They can be used to indicate the potential and priorities for management options in such areas as flood control pollution reduction and biodiversity conservation Functional assessment enables the user to predict the functioning of a wetland area without the need for comprehensive and expensive empirical research The FAPs therefore provide a methodology that can be used by both experts and non experts to assess wetland functioning relatively rapidly The volume includes an electronic version of the FAPs on CD which automates aspects of the assessment once the initial recording stage is completed It is anticipated that the FAPs will be used by a range of individuals or organisations concerned with wetland management who wish to gain a better understanding of the processes functions services or benefits and potential of the wetlands for which they have responsibility Provides a systematic methodology to evaluate how wetlands function Allows non experts to assess wetland functioning rapidly and cost effectively Automates aspects of the functional assessment through the accompanying CD ROM
