# Finding an Epicenter

An earthquake releases energy that travels through Earth in all directions. This energy is in the form of waves. Two kinds of seismic waves are P waves and S waves. P waves travel faster than S waves and are the first to be recorded at a seismograph station. The S waves arrive after the P waves. The time difference between the arrival of the P waves and the S waves increases as the waves travel farther from their origin. This difference in arrival time, called *lag time*, can be used to find the distance to the epicenter of the earthquake. Once the distance from three different locations is determined, scientists can find the approximate location of the epicenter.

**OBJECTIVES**

**Using Scientific Methods** Analyze P waves and S waves to determine the distance from a city to the epicenter of an earthquake.

**Determine** the location of an earthquake epicenter using the distance from three different cities to the epicenter of an earthquake.

**MATERIALS**

- calculator
- drawing compass
- ruler

**PROCEDURE**

1. The average speed of P waves is 6.1 km/s. The average speed of S waves is 4.1 km/s. Calculate the lag time between the arrival of P waves and S waves over a distance of 100 km.

**Into the Field of Suffering** David Schenck,Scott Neely,2023 This book is written for people who spend the bulk of their days working with others who are suffering What I want to offer here is an invitation to conversation a conversation with me a conversation within yourself and a conversation with the people with whom you work A conversation about what it means to spend your days with people whose lives are disrupted by illness or overwhelmed by brokenness That can be brokenness in bodies It can be anything from flu to cancer from sprains to AIDS It can be traumatic brain injury severe mental illness or debilitating chronic conditions Or it could be families in neonatal units dealing with children with debilitating genetic defects struggling to make decisions about if when and how to end lives Or violence on the street or the devastation of a flood ravaged community What is it that we can learn from these situations I put an emphasis on learning because I do believe that if we don t learn every day if we don t learn every hour this work will destroy us It s important to use a word as strong as destroy There are reasons not everyone does this work and there are limits to how much of this work

anyone can do What we must keep asking ourselves is Why do we do this work Why are we drawn to those who suffer What is it that s good about this And what not so good What is it that is admirable and something that we should show enormous compassion and respect to ourselves for And what is there in it that is self destructive that we should be constantly questioning and challenging To answer these questions we must get past the assumption that attending to the suffering is entirely saintly and noble or that it is a symptom of a deep perverse drive Much attention is rightly being focused on people who serve on healthcare s front lines The framework for these discussions tends most often to be the terms burnout and moral distress These terms certainly point to very real experiences very painful experiences Unfortunately they also often carry with them judgmental messages You are failing You must do better What I want to say to you here is that while these terms point to realities for those of us who have worked with suffering day in and day out they may not help us move and grow into the deeper ranges of compassion and recognition and attention that are possible unless we supplement them with other constructs and insights When I say that I want to encourage a conversation within you part of what I have in mind is this We are all multiple selves And one of the things that happens when we work with people and communities that are suffering and in pain physical pain psychological pain spiritual pain is that distinct pieces of ourselves often respond quite differently to what is going on in front of us Many different feelings are stirred We may be terrified and at the same time move with great compassion while being also completely exhausted and madly energized

Seismogenesis and Earthquake Forecasting: The Frank Evison Volume II Martha Savage,David A.

Rhoades,Euan G. C. Smith,Matthew C. Gerstenberger,David Vere-Jones,2011-06-29 This special issue of Pure and Applied Geophysics is the second of two volumes containing an augmented collection of papers originating from the Evison Symposium on Seismogenesis and Earthquake Forecasting held in Wellington New Zealand in February 2008 The volumes honor Frank Evison s interest in earthquake generation and forecasting This volume includes descriptions of earthquake forecasting test centers through the Collaboratory for the Study of Earthquake Predictability CSEP program and the first results from the Regional Earthquake Likelihood Model RELM experiment in California Other papers discuss methods of testing predictions in particular by the use of error diagrams There is discussion of prediction methodologies using seismicity

including an application of the statistical technique of Hidden Markov Models to identify changes in seismicity and a new technique for identifying precursory quiescence Several papers employ other data besides seismicity such as geologically determined faults calculations of stress changes via Coulomb stress modeling tomographically determined velocity structure groundwater crustal deformation and comparisons of real earthquakes to synthetic seismicity determined from hypothesized earthquake physics One paper focuses on the prediction of human casualties in the event that a large earthquake occurs anywhere on the globe The volume will be useful to students and professional researchers who are interested in the earthquake preparation process and in converting that understanding into forecasts of earthquake occurrence
