1

Install smoke alarms on every level of your home, inside bedrooms and outside sleeping areas.

2

Test smoke alarms monthly. Replace batteries at least once a year.

3

Have a family fire escape plan and practice the plan twice a year.

4

If there's a fire in your home, get out, dial 911 and don't go back inside.

5

Keep matches and lighters out of children's reach

6

Use flashlights during power outages, not candles.

7

Never leave a burning candle unattended.

8

Turn off space heaters when you leave the room and don't leave them unattended.

9

Only use smoking materials outside.

10

Keep flammable items away from anything that can get hot, such as space heaters.

Congress. House. Committee on Energy and Commerce. Subcommittee on Commerce, Consumer Protection, and Competitiveness,1992 **Fire Safety Management Handbook** Independently Published,2020-03-23 PrefaceSince the second edition of this book some things have not changed and others have The need for safety professionals to understand basic fundamentals is essential inhazard recognition evaluation control measures and the standards to ensure com pliance with current required fire codes The safety manager today faces a moral andlegal responsibility to the community worksite and to the public Safety managersneed an understanding of the duties and responsibilities for which they are account able The primary purpose of the Fire Safety Management Handbook is to integratea broad field including the National Fire Codes NFPA into a single manuscripttthat deals with all aspects of the fire sciences This text presents the key elements that comprise an effective fire safety manage ment program It was written for fire safety professionals safety managers scientists and college instructors as a useful reference in dealing with the varied problems offlammable hazardous materials as well as managers who are accountable for firesafety as part of a comprehensive safety and or a risk management program Safety programs are typically evaluated based upon the results they achieve fortheir respective organizations Tangible results of any safety program can be difficultto measure Over the years the profession has evaluated safety program effective ness by measuring the failures produced such as accident frequency and severityrates or property loss rates Measuring safety programs by their failures is counter productive By the

time any safety program produces the failures to measure it is too late for managers to implement activities that could have prevented those failures from occurring in the first place. While the safety profession has never proven that a direct correlation exists between various safety program activities and achieving favorable program results, safety managers strive to identify the possible relationships. Successful safety managers place an emphasis such as their time and organizational resources on implementing proactive activities that impact the results of their safety programs. Safety program effectiveness should be measured by the quality, rigor, and utility of these activities as well as their impact on the bottom line. Having established that an effective safety program emphasizes proactive activities, this text places special attention on the fire safety activities that can achieve the most optimum results. Developing and implementing an effective fire safety management program can reduce property loss, insurance premiums, demonstrate why certain practices are being used, help minimize the financial impact of business interruptions, boost customer service and public images, foster an efficient work environment to help realize quality gains, impact favorably on the profitability of an organization, evaluate building construction.
