Hinskens,2006-11-30 This volume presents 16 original studies of variation in languages representing the three main European language families as well as in varieties of Greek and Hungarian The studies concern variation in or across dialects or dialect groups in standard varieties or in emerging regional varieties of the standard Several studies investigate a specific linguistic element or structure while others focus on areas of tension between variation and

prescriptive standard norms on regional standard varieties and regiolects on problems of linguistic classification from folk linguistic or dialect geographical perspectives and the classification of speakers Language acquisition plays a main role in three studies The studies in this volume represent a range of methods including ethnographic and interpretative approaches conversation analysis analyses of the internal and geographical distribution of dialect features the classification and quantitative analyses of socio demographic speaker background data quantitative analyses of both diachronic and synchronic language data phonetic measurements as well as quasi experimental perception studies The volume thus offers a microcosmic reflection of the macrocosmos of world wide research on variability in originally European languages at the beginning of the 21th century and the linguistic expression of cultural diversity Automated Essay Scoring Mark D.

Early Life Origins of Ageing and Longevity Alexander

Vaiserman,2019-07-29 This book provides a comprehensive overview of the field of developmental programming of ageing phenotypes Although gerontological research has traditionally focused on later stages of the life cycle growing evidence indicates that both the rate of ageing associated functional declines and the risks of later life chronic pathological conditions can be traced to origins early in life While other books in the field concentrate on the developmental origin of particular disorders this volume offers a detailed guide to all important aspects of the role of early life conditions in programming both chronic pathological conditions and the ageing process Interest in the study of ageing and longevity had its beginnings in research on the fetal origins of adult disease This has evolved into a hypothesis on the Developmental Origins of Adult Health and Disease DOHaD which postulates that adverse environmental exposures during critical in utero and early postnatal stages of development may permanently change physiological responses and cause functional impairments and disorders in adult life In this book the contributing authors and leading experts from around the world describe research on mechanisms underlying the developmental programming phenomenon as well as interventional strategies aimed at restoring developmentally disrupted epigenetic patterns Early Life Origins of Ageing and Longevity benefits a wide audience of working scientists clinicians and advanced students and will also interest scientifically curious general readers who wish to know more about current research in this rapidly evolving field
