MATTER

Everything is made of matter. _____ makes up all the "stuff" in the universe — anything that takes up space and has mass is matter. All matter is made up of _____, which are in turn made of protons, neutrons and electrons. Atoms hang out together to form _____, which are the building blocks for all types of matter. Both atoms and molecules are held together by a form of potential energy called _____ energy.

Matter exists in different _____. We are going to investigate the three most common states: Solid, Liquid, and Gaseous or Gas State.

SOLID

In a solid, particles are packed _____ together so they don't move much. The forces between particles are so strong that the particles cannot move freely but can only vibrate. Because of this, particles in a solid have very _____ kinetic energy. _____ Energy is the energy an object has because of its motion. Solids have a definite _____, as well as definite volume and mass, and do not conform to the shape of the container they are placed inside. Conform just means to change in order to fit. Solids are true to themselves, they don't change for anyone, unless they get really uncomfortable under pressure or things begin to heat up. Solids also have a high _____, meaning that the particles are tightly packed together. Solids can only change their shape by an outside force.

LIQUID

In a liquid, the particles are more loosely packed than in a solid and are able to _____ around each other, giving the liquid an indefinite shape. Therefore, the liquid will _____ to the shape of its container.
