Inmarsat System Definition Manual:

Satellite Communication Systems Design S. Tirró, 2012-12-06 Writing a comprehensive book on satellite communications requires the command of many technical disciplines and the availability of up to date information on international recommendations system architectures and equipment standards. It is therefore necessary to involve many authors each possessing a good level of knowledge in a particular discipline. The problem of using a coherent and unambiguous set of definitions and basic terms has been solved by including in the book all the background information needed for understanding satellite communication systems without any major reference to other textbooks specializing in particular disciplines. The obvious consequence of this approach has been the large size of the book with the advantages however of practically complete independence from other books, more systematic discussion of the subject matter and better readability. After the required background information emphasis has been placed on the discussion of techniques and system design criteria rather than on specific equipment implementation or description of particular systems. The book may be divided in five parts as follows. The first five chapters provide most of the required background information. Chapter 6 is an introductory outline of satellite communication systems. Chapters 7 to 13 deal with the various aspects of technical system design. Chapter 14 discusses system economics. Chapter 15 provides a brief insight into some foreseeable future developments of satellite communications.

Aeronautical Public Correspondence by Satellite Tare Brisibe, 2006 This book covers the evolution of satellite based Aeronautical Public Correspondence and the operational environment in which services are being offered. Followed by an examination of applicable rules including the relevant institutions from which they emanate, attention is devoted to the effect of State Sovereignty applicable in jurisdictions such as territorial airspace, the Arctic, Antarctica and the High Seas as well as to activities such as telecommunications, air transport, copyright protection and trade in services. Particular attention is given to the ITU Radio Regulations, ITU Sector Recommendations, ICAO Council Resolutions, International Copyright Laws, National Operational Procedures and Statutes. A presentation of the relevant Laws and Regulations currently in force is made while the subject of Liability is analysed against the backdrop of Case Law and legal instruments in the context of both Public and Private International Law. Looking to the future, the volume discusses the influence of Convergence and the need for more appropriate Regulations. It concludes with a Draft Agreement on the Use of Aircraft Earth Stations for Non Safety Purposes.

Communications Mohamed Slim Ben Mahmoud, Christophe Guerber, Nicolas Larrieu, Alain Pirovano, José Radzik, 2014-12-01. This book deals with air ground aeronautical communications. The main goal is to give the reader a survey of the currently deployed emerging and future communications systems dedicated to digital data communications between the aircraft and the ground, namely the data link. Those communication systems show specific properties relatively to those commonly used for terrestrial communications. In this book, the system architectures are more specifically considered from the access to the application layers as radio and physical functionalities have already been addressed in detail in others books. The first part is an introduction to aeronautical communications, their specific concepts, properties, requirements and terminology. The second part presents the currently used systems for air ground communications in continental and oceanic area. The third part enlightens the reader on the emerging and future communication systems and some leading research projects focused on this scope. Finally, before the conclusion, the fourth part gives several main challenges and research directions currently under investigation. **Mobile Systems** Ian Stanley Groves, 2012-12-06. Mobile systems, primarily cellular telephony, have been the fastest moving telecommunications development to date with a world wide customer base that in the ten or so years to April 1996 reached 100 million and continues with a current growth rate of 60% per annum world wide. Predictions suggest that the customer base will exceed 1 billion within the next ten years and that the saturation level is around 80% of any population. Faced with such statistics, any book such as this can proffer little more than a snapshot of the activities and developments that are at present taking place within the mobile world. It can however reflect on some of the underlying principles that support the industry. The opening chapter offers a vision for the future of mobile communications that of more mobile than fixed connections to the world's telecommunications networks, one which interestingly pre-dates the emergence of the information superhighway. The Internet, whose growth of computer networks has in recent years exceeded that of even mobile systems, is demanding ever more bandwidth to support its multimedia applications and access for people on the move. The communications needs of the next century customer are the drivers behind the convergence of computing and

telecommunications networks the mobile component of which will be realized as Third Generation Mobile Systems (3G)
