A company is tracking the number of times a post to a popular social internet site has been shared. The data is shown below

Hours, x	1	2	3	4	5	6
Shares, y	28	44	49	65	88	100

A. Determine a linear regression model and an exponential regression model that best fits these data. Round all parameters to the nearest tenth.

B. The correlation coefficient for both models, when rounded to the nearest hundredth is r =0.99. What does this tell you about the predictive ability of these models.

C. Does your linear model from part A over or under predict the number of shares at 6 hours?

D. After 24 hours, the post has been shared 10, 952 times. Which model does a better job extrapolating the data trend out to 24 hours? Justify.
