

Frog Dissection

Purpose: To investigate the external and internal anatomy of a frog and relate the structure of a frog to that of other vertebrates.

Materials: dissecting pan, dissecting scissors, dissecting pins (10), forceps, probe, goggles, frog specimen, plastic storage bag

PART ONE: EXTERNAL STRUCTURE

Read each step carefully. Using your diagram and careful observation of your frog locate the following external parts and complete the following information:

1. Take a look at both the **fore (front) and hind (back) legs**. Compare their length and structure. Try to stretch out the hind legs to see their full length.
 - a. Number of digits on the fore (front) leg or arm: _____
 - b. Number of digits on the hind (back) leg: _____

2. To determine the frog's sex, look at the hand digits, or fingers, on its forelegs. A male frog usually has thick pads on its "thumbs," which is one external difference between the sexes, as shown in the diagram below. Male frogs are also usually smaller than female frogs.
 - a. Is your frog a male or a female?

3. Observe the **eyes** of your frog. The eyes are located on the top of the frog's head, as opposed to on the front (like yours) or on the sides (like a fish).
 - a. Why do you think the placement of the eyes is particularly beneficial to the survival of the frog in its environment?

4. Notice the membrane on the eyes. Frogs use their regular set of eyelids to keep their eyes moist and clean. This membrane is called the **nictitating membrane**. It is a semi-transparent lid that covers the eye completely, helping the frog see underwater and hide from predators.

5. Observe the **ears (tympanic membranes)** located behind the eyes. Now look at the roof of the mouth. You will see two openings on each side of the jaw. Carefully insert the probe into the openings. These are the **eustachian tubes** which lead to the ears. The tympanic membrane and the eustachian tubes aid in the frog's hearing.
